About the company

Arta seram

About us

This company started its business with the production of third-fired wall border tiles. In addition to this kind of tile, as one of the most favorable products, the company started to produce glazed tiles, tiles with a layer of glass, carpet tiles, and resin products. All these products used in numerous places, especially in kitchen, bathroom, lobby and also in other places have brought the company into a predominant market position. From its initial small scale, the company grew and expanded to develop a presence in numerous markets across the world. Right from the very start, it started exporting our products to more than thirty countries in the world; including Russia, Turkey, Iraq, Tajikistan, Afghanistan, Chechnya, Kenya, South Africa and a great number of other countries. The company, creating a widespread network of showrooms, has a strong reputation as one of the most established tile and ceramic brands at the global level

About the company

Saroj Afraz Idea Pardazan

Iran is a country full of historical, cultural, artistic and tourism values, from the Takht Jamshid collection of Shiraz to the Blue Mosque of Tabriz, from Shahriri Meshkin Shahr to the signs of the burnt city of Zabul, from Mount Sablan Serg to the Everlasting Persian Gulf, and special occasions for the region and Iranian peoples. Despite having such a huge source of inspiration, the lack of cultural and artistic signs is strongly felt at the level of the local community.. The presence of unfamiliar designs and strange symbols is meaningless or nonsensical, such as Greek congresses on urban furniture and symbols of Freemasonry and Satanism on jewelry. That absence and this presence has caused socio-cultural disintegration, lack of belonging and loss of identity, especially among the young generation. According to the mentioned issues and problems, Saroj Afraz Ideas Company with registration number 14326 supports native artists and extracting and reviving existing traditional signs and designing new motifs, with the aim of preserving and protecting national and local identity. the basis of the traditional art of the region) and its combination with traditional and modern materials and materials (concrete, brick, metal, wood, etc.) in the field of construction and production 1- urban furniture 2- home furniture, 3- accessories and 4- ornaments It started working in 2016.

About the company

Iran online market platform

Advantages of Irans online market:

1.Using the latest programming technologies

In Iran's online market, there is no limit to the customization of the facilities required by the sellers, and every feature and possibility that can be useful for the seller and the online market is designed and implemented. Iran's online market launches this platform using the latest available technologies and provides users with many features and high security.

2.SEO

There are many sites and pages on the web that provide useful content, but never have a chance to rank at the top of search results. Iran online market uses experienced employees and experts to SEO all products and sellers products on this platform with the latest available methods in order to be at the top of searches and have more sales.

3. Reduce costs

Setting up an website requires a lot of money, and just having a store for business is not enough, and we must also consider maintenance and optimization costs. Iran online market has provided this possibility for business and production owners.

4. easy access

Due to the extensive support of Iran online market platform, it is possible to answer and solve problems and answer users questions in Iran online market at any time, so that users can easily use the site.

5. Better marketing

Using experienced experts in the field of digital marketing, the online market team widely exposes the products of its sellers to buyers in order to have the most sales on this platform.

Work with us

Iran online market platform

We are ready to cooperate in the following fields:

1. Manufacturers
2. Large stores and chains
3. Home jobs
4. Rural jobs
5. Female head of the household
6. Handicrafts and local products

Cooperation parties of Iran online market:

1. Ministry of Communications and Information Technology
2. Science and Technology Park of Ardabil Province
3. Iran National Post Company
4. Tipax company
5. Ardabil Province Housing Foundation

About the company

Sabalan Noor and EPS Company

Sablan Processing Electronics Company (private shares) was established in 2018 on a land of 5000 square meters in Ardabil Industrial Town 2, and with the construction of AST and Clean Room halls, it started to install and start up fully automatic machines, assembling SMD and DIP electronic boards. With the registered EPS brand and with the planned plans, he defined research and development as one of the main pillars of the company's development and began to produce special electronic parts for cars, and with the efforts of experienced engineers and managers, he succeeded in producing single electronic parts. in the automotive industry and produces advanced and high-tech parts with the best quality and supplies them to its customers. In order to maintain the market and customers and to control the quality of its production items, this company has taken the initiative to obtain the ISO 9001:2015 certificate and IATF16949:2016 from IMQ Italy. Also, recruiting and employing provincial and national elites in the research and development unit of the company is one of the noteworthy achievements of the company.

About the company

Shimi Pajooohan

Shimi Pajooohan Co. (P.J.S) was established in 2001 with the investment of the private sector in Ardabil Industrial Town, with the aim of producing carbon adsorbents in Iran. In 2006, it succeeded in obtaining an exploitation license for the production of various types of activated carbon and different types of industrial catalysts. Shimi Pajooohan Co. then made every effort to increase the production and development of products using domestic raw materials and competitive prices with foreign products. Using the scientific, technical and specialized capabilities of the company, Shimi Pajooohan Company was able to develop and expand its activities in the field of production of graphite parts, calcination and activation of anthracite, production of catalysts based on gamma alumina, calcination of petroleum coke (CPC) and production of Metallurgical Coke. Shimi Pajooohan Co. with its laboratory equipment for measuring technical characteristics, produces its products based on the required standards and consumer approval. And supplies its products to the country's major industries such as oil, gas, petrochemical, refinery, sugar and glucose, chemical, drinking water treatment and industrial wastewater treatment.

Chlorination catalyst

Activated carbon

Metallurgical coke

Graphite parts

Activated carbon

Activated carbon or activated carbon or activated charcoal is a black, odorless and tasteless solid substance and refers to a type of carbon that has a porous structure, small pores and a high internal surface. Due to its high internal area, porous structure, high adsorption capacity, surface reactivation capability, activated carbon is a unique material that is used in adsorption processes as a strong adsorbent for substances dissolved in gases and liquids or chemical reactions.

Next product

Chlorination catalyst

For the first time in Iran, we produced gamma-alumina-based oxychlorine cylindrical catalyst to carry out the oxychlorine reaction. This catalyst is produced by impregnating gamma alumina with copper and other additives. The oxychlorite catalyst based on gamma alumina was loaded and used for the first time in the ethylene dichloride production line, which is the raw material of the PVC production line, after being evaluated in the laboratory and the semi-industrial unit in collaboration with the port unit. Imam Petrochemical Research and Process Group in 2014. Fortunately, the results were very satisfactory and favorable.

Next product

Graphite parts

Amorphous carbon turns into graphite under certain conditions (heat and pressure). Graphite is an allotrope of carbon that consists of layers of carbon atoms and is formed from the transformation of plant materials. These layers give graphite slippery and greasy properties. Hence, graphite becomes a very soft mineral. Graphite has a dark gray color and metallic luster. Graphite has high thermal and electrical conductivity. At very high pressure and temperature, carbon layers stick together and graphite turns into diamond. This process is actually how synthetic diamonds are produced.

[Next product](#)

Metallurgical coke

We produce metallurgical coke semi-industrially. Metallurgical coke is a high-carbon solid material obtained by heating coal at a certain temperature, time and pressure. By performing this process, the volatile substances in the coal are released in the form of gas and a black and porous solid substance called metallurgical coke is produced. Then metallurgical coke is produced, granulated and used with different granulations in different industries. Metallurgical coke is widely used in metallurgical industries such as metal smelting, blast furnaces, ferroalloy industries, etc.

About the company

Marsus Damon Foundation Company

Marsus Damon Foundation Company is a knowledge-based group located in the Science and Technology Park of Ardabil province, and the field of work of this company is the design and production of all kinds of medical equipment inside the country. Banian Marsoos Damon Company was registered in Tehran Companies and Non-Commercial Institutions Registration Organization under registration number 449011 in 1371 and has started its activities. Our respiratory products include: Intubation video laryngoscope (intubation on the patient's trachea), which was produced for the first time in the country, is used for intubation in the operating room. Engineer Nouri continued: This device was designed with internal knowledge and relying on the power of internal experts and reached the production stage, and compared to similar foreign products, it has better quality and a much lower price. This device is imported from a German company and imposes heavy costs on the country's health community. With the domestic production of this device at a lower price than the foreign model and with the same quality, we have taken an effective step in improving the services of our country.

About the company

Artaville Converters

In 2018, **Artaville Converters Company** entered the field of food and pharmaceutical machinery manufacturers, during this time, in addition to launching numerous projects inside the country, it has been able to rely on its experienced managers and employees in neighboring countries such as Iraq, Azerbaijan, Armenia and Afghanistan will also launch several projects. Artaville converter company with a brilliant history in the food, dairy and pharmaceutical industries is one of the most famous manufacturers of machines in this field. With regard to the continuous research and development policy, this company has been able to advance the design and manufacture of its machines in a scientific way and in this regard, it has been established as a technological unit in the science and technology park.

pasteurizer package

Centrifugal pump

Pizza cheese grater

Volume receiving
unit of milk

Centrifugal pump

It is used to move and transfer materials in the food, dairy, beverage, pharmaceutical, chemical and water-related industries. Technical characteristics: high efficiency, low energy consumption, hygienic design, with material input and output and electrometer (with power of 0.55 kw, 0.75 kw, 1.5 kw, 2.2 kw, 3 kw, 4 kw, 5.5 kw, 7.5 kw) along with the cover and base, which are all made of SS304. Capacity: The capacity range of centrifugal pumps is very diverse and changes based on different applications.

About the company

fannavarane Madarpardazae Arta novin

About us

We have established a company in the field of design, manufacture and production of advanced electronic equipment and tools so that we can take steps to meet the technological needs of the country by relying on modern science and experience. We are doing our best with passion and enthusiasm to make and supply an advanced product and help people's capital to be consumed in our city and country. Our goal is to identify the country's technological needs in the field of precision equipment and instruments, artificial intelligence, IOT, medical engineering and rehabilitation, and knowledge-based needs and to continue designing and mass producing those products. We are trying to attract specialized staff and create employment in this field by developing this goal.

Gradiometer Advance Pro

Gradiometer Magrad

Gradiometer Future 2020

Gradiometer Advance Pro

This device is used to measure the intensity of the magnetic field in two modes, the total field and the vertical gradient, using the method of magnetometry and magnetic gradiometry of materials, anomalies, and rocks under the surface of the earth. In this way, diamagnetic, paramagnetic and ferromagnetic materials and stones can be distinguished from each other. With this device, it is possible to measure the intensity of the magnetic field of the whole earth in terms of nano-tesla quickly and in a large number of impressions and present the results in the form of different magnetic profiles and maps.

Next product

Gradiometer Future 2020

Gradiometer Feature 2020 is a familiar product for old users and customers of Fannavarane Madarpardaze Arta Novin company. This product, which is the oldest product of the company, has a control unit that, through this unit and a software menu, provides significant features to users. Feature 2020 is offered to valued customers in the form of a single-axis gradiometer (two sensors). Due to its minimum price but competitive and sometimes superior features compared to imported and foreign samples, Feature 2020 is one of the best-selling products of Fannavarane Madarpardaze Arta Novin company.

Next product

Gradiometer Magrad

Magrad gradiometer scanner (MAGRAD) is a new product of Arta Novin circuit technology company, which has met the needs of most users based on the opinion of users and by taking advantage of the advanced gradiometer manufacturing experience and the addition of a large touch screen. MAGRAD gradiometer scanner with three new and unique features: the ability to display scan generals on the screen, automatic sensitivity determination based on soil conditions without user intervention, and the possibility of setting the threshold to determine the minimum required field, opens a new horizon for customers and users. Professional gradiometric products are open.

About the company

Azar Sayan

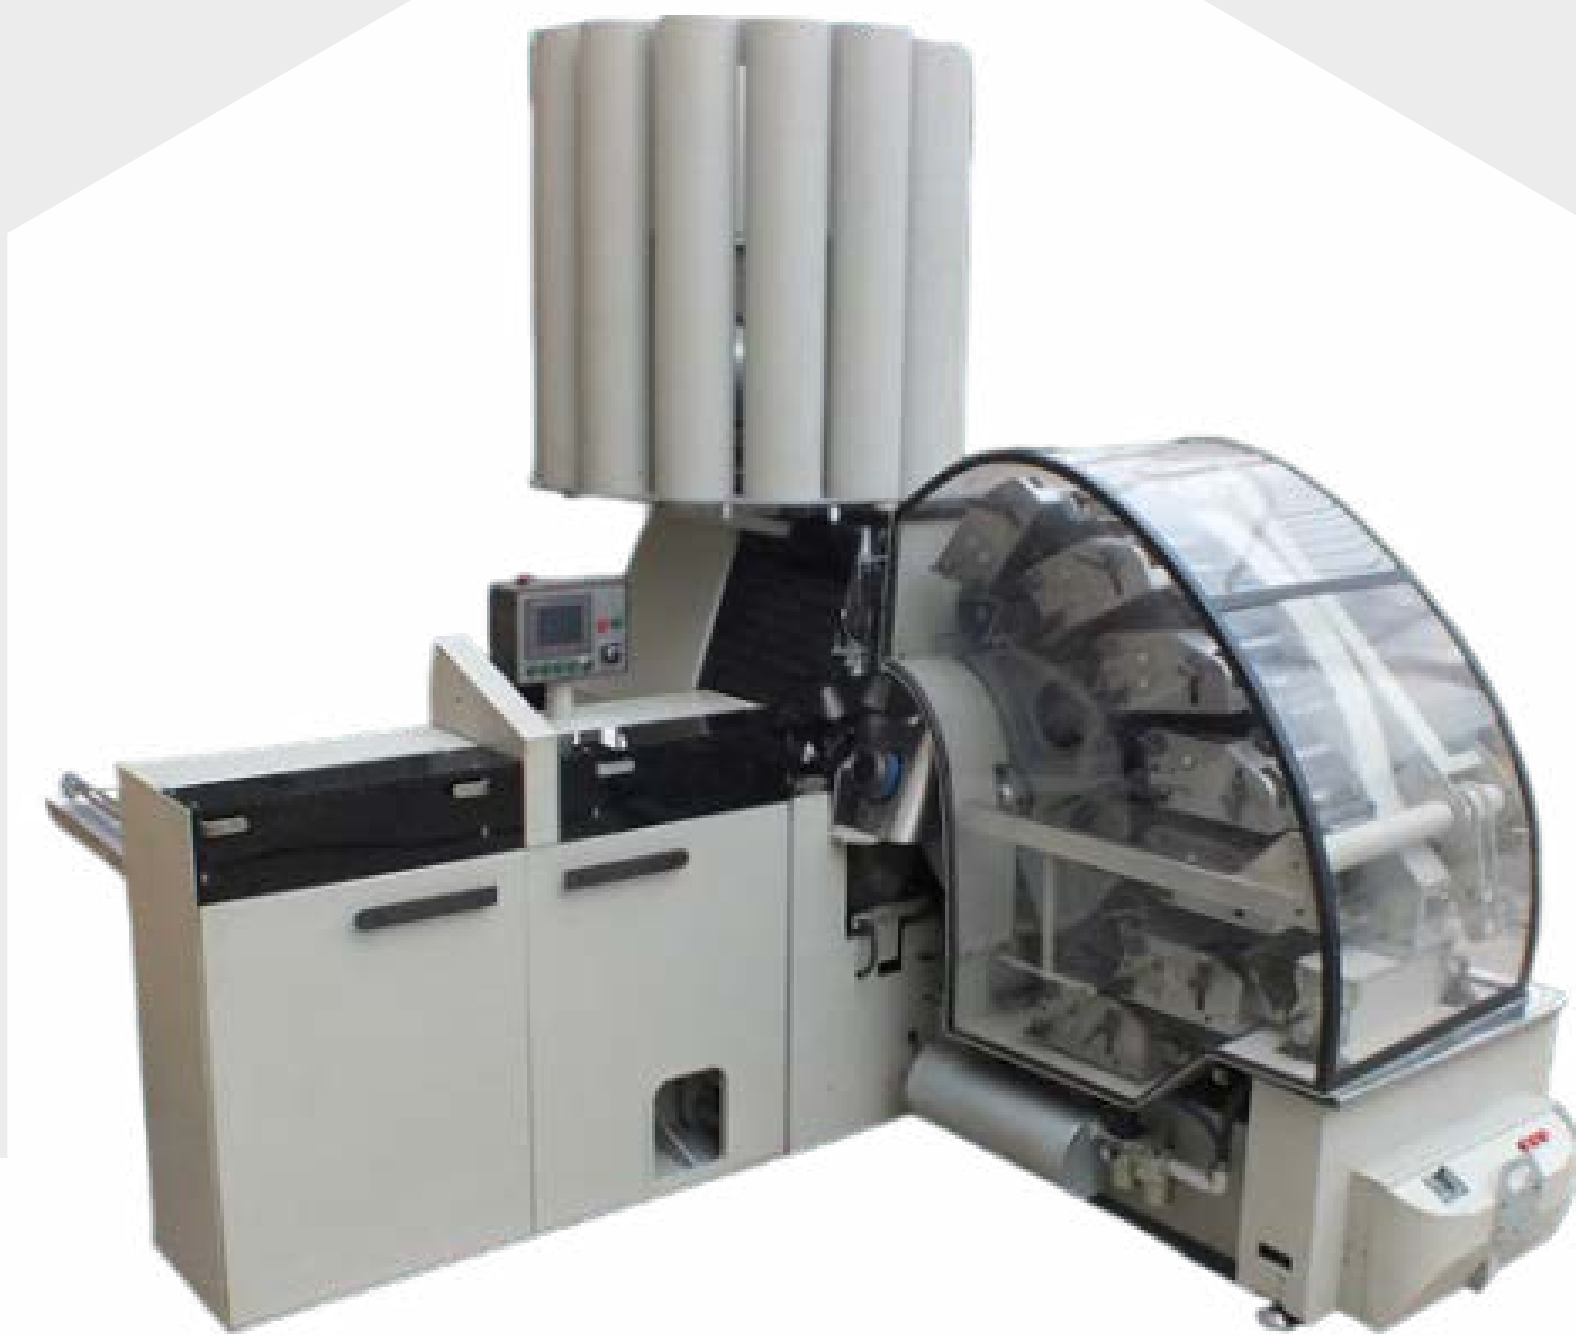

Azar Sayan machinery manufacturing company was established in 1990 in order to manufacture cup printing machinery which was later called 1200 series. The project was a great success and more than hundreds of machines were sold in a short period of time. Afterward, the company continued designing and developing dry offset and screen print machinery all of which were unique. Originality and innovation have been fundamentals for devising each machine to support company goals. Regardless of what other companies accomplish, we have always thought of providing the best efficiency and this has resulted in originality of our products.

Automatic dry printing machine

Tube printing machine

Automatic dry printing machine

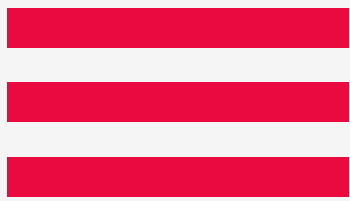

1. Automatic glass bank with a capacity of 1700 to 2500 pieces (can be increased up to 6000 pieces)
2. The possibility of setting the color registry without stopping the device
3. Fully automatic sorter at the exit by counting and separating the cups
4. The possibility of installing a glass filling robot in the carton (on request)
5. UV dryer on mandrel
6. Seven colors – dry offset

Next product

Tube printing machine

1. Feeder: Pipes are fed by pneumatic jack and rail guide on the device
2. Includes a free mandrel set for the first print upon delivery
3. Maximum speed: 7000 pieces per hour
4. Maximum printable opening: 60mm
5. The car can be painted
6. Electronic treatment of plastic containers
7. Seven colors – dry offset

About the company

Azar Sayan

Arad Shimi Sabz Banian Company is one of the companies supported and located in Science and Technology Park, among the companies active in the field of producing healthy agricultural fertilizers (solid and liquid) in the country. This company believes in healthy agriculture and has produced new products that produce most of the organic compounds along with 16 elements required by the plant in the form of excellent compounds and in line with metabolic activity from the point of view of enantiomers without hormones and harmful. Compounds. Chemical ligands (EDDHA-EDTA,...) and elements were enriched harmoniously and with this structure they gave immobile elements the ability to move in the vascular system of the plant. The technical department of Arad Shimi Sabz Banian Company is a combination of experienced experts and educated young people who are responsible for checking, registering and promoting the use of the company's products and are in constant contact by visiting farms, holding educational seminars and participating in exhibitions. . They respect farmers to encourage and guide them to use proper, rational and responsible agricultural institutions.

Iron minochelate

Complete micro fertilizer

Non-oxidized liquid sulfur

Liquid organic fertilizer

Complete micro fertilizer

Complete micro amino chelate fertilizer produced by Danesh Banian Arad Chemi Sabze Banian contains micronutrients along with amino acids. This product is produced on the basis of free amino acid chelate and has a stimulating effect on the plant during the period of growth and flowering. This product is enriched with small elements (as main factors) from the category of liquid foliar fertilizers, which provides low consumption elements (micro elements) with a proportional percentage of micro and macro elements and amino acids.

Next product

Iron minochelate

Iron is one of the important and underutilized elements that plays an essential role in the production of chlorophyll, respiration, photosynthesis and the activity of many plant enzymes. This element increases the quantity and quality of the product by increasing cell metabolism. Dense alkaline soils (calcium-sodium) (clay) and lack of organic matter in the soil, as well as excessive use of phosphorus fertilizers (superphosphate), excessive irrigation, improper drainage, and the presence of bicarbonate in the water are among the factors that cause become Decreased absorption of iron by iron-deficient plants is one of the most common nutritional deficiencies in most of Irans agricultural and garden sectors.

Next product

Liquid organic fertilizer

Danesh Banian Arad Chemi Sabze Banian is one of the companies located in Science and Technology Park, which has been able to produce a product called liquid organic fertilizer containing organic substances, amino acid, humic acid and macro (N, P, K) and micro elements. In addition to organic matter, this product provides humic acid and amino acid with all the nutrients needed by the plant. In this product, nutrients are provided in an appropriate and fully absorbable form with an acidic pH. Amino acid chelates are also used for micronutrients, making them quickly absorbed by plants.

Next product

Non-oxidized liquid sulfur

Non-oxidized liquid sulfur fertilizer (Aramine) is compatible with the environment and reduces agricultural costs to a great extent by eliminating pests and strengthening crops. The organic matter in this product activates beneficial soil bacteria and actually facilitates biological oxidation in the soil. By disinfecting the soil, this fertilizer helps the health of the plant and the environment, and if it is used properly, it reduces the consumption of chemical poisons, and in addition to increasing the productivity of the products, it will increase the quality of seeds and fruits, as well as increase their shelf life.

Adlan Raad, the role player of tomorrow

Yux will charge whatever you want

Why did we choose leather?

One of the most important advantages of leather is its durability. Well-made products can be passed down from generation to generation. From handbags to shoes and clothing, leather products cannot be duplicated, which is why they are often combined with technology that gives the product a more luxurious and personal feel. Durability, repairability, natural beauty, decomposability and high shelf life are the reasons for choosing the company. It is also easy to maintain. Adlan Raad Naqsh Afarin Farda Company, located in the Science and Technology Park of Ardabil province, is a manufacturer of bags with solar panels and chargers for various devices with a patent in 2017 under the brand name Divix. Our products are the best choice for those who have urgent needs. For charging as well as having a means of carrying items and documents. All products have warranty and after-sales service.

About the company

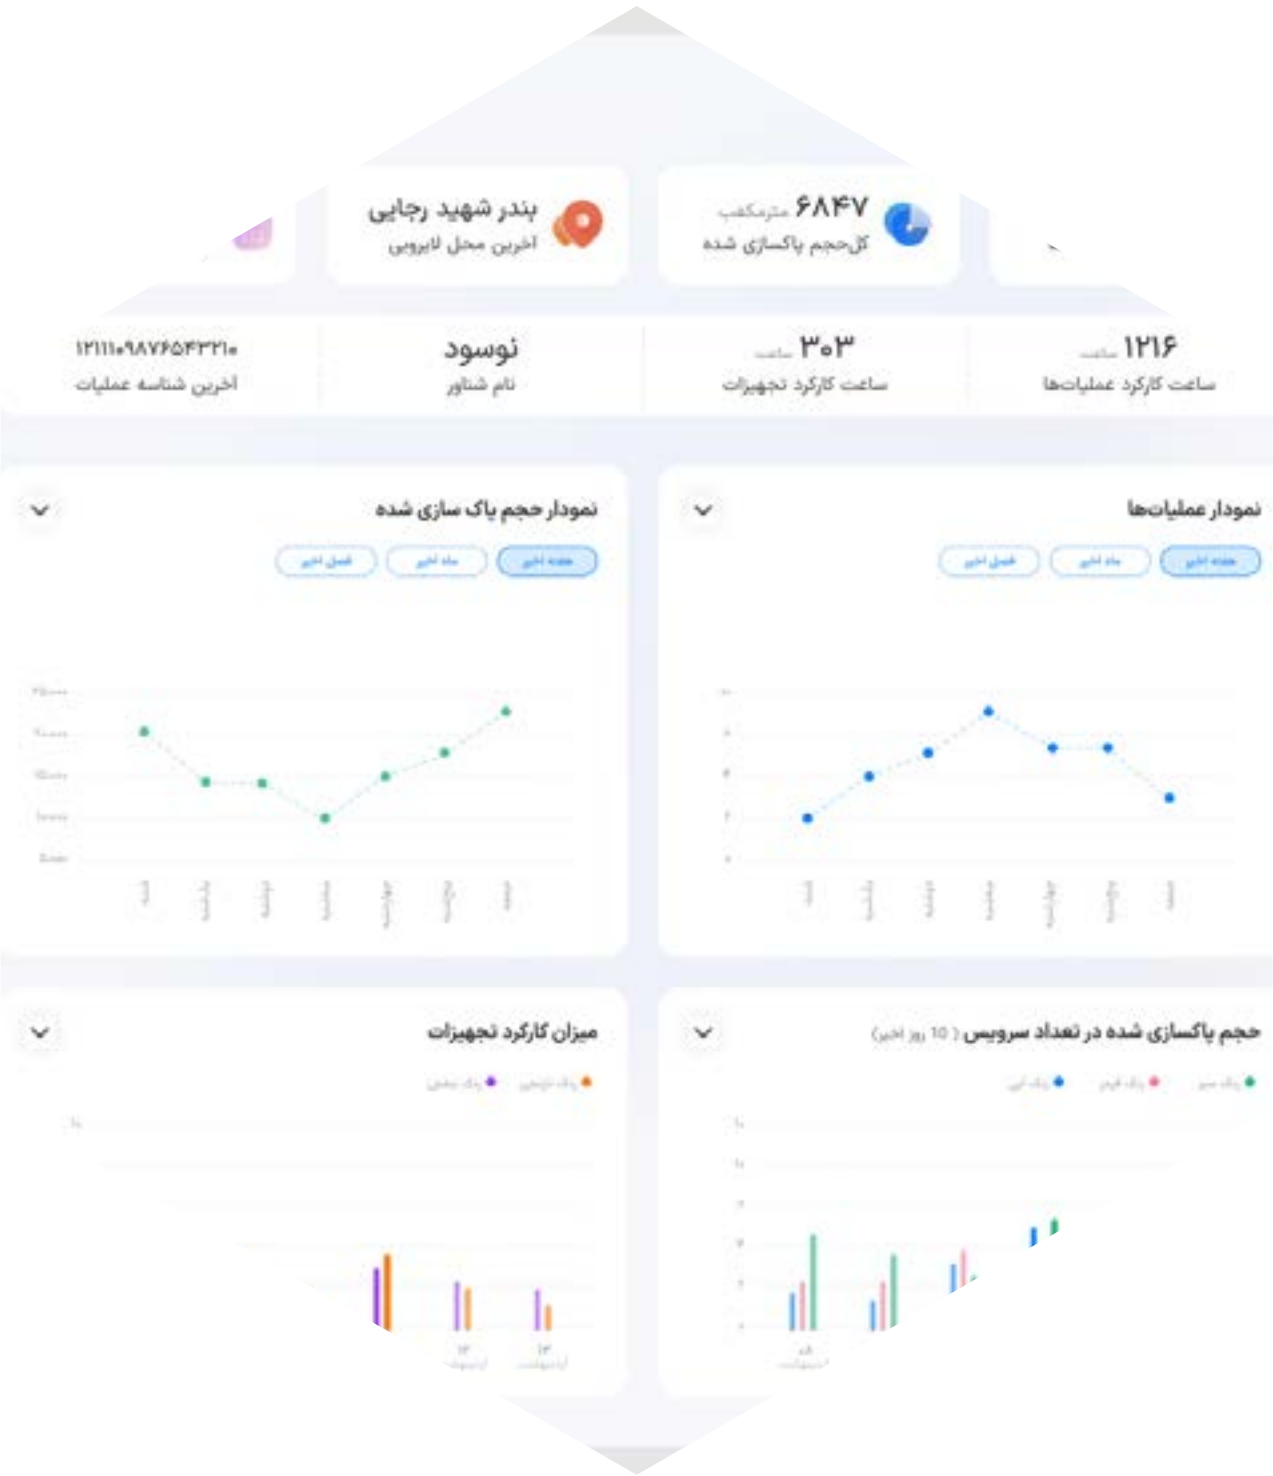

Pezhvak Electronic Fartak

Since 1994, we started working with a team of 3 people in the field of smartening the ports, which led to the smartening of navigation aid signs in Chabahar port. In 1996, he succeeded in winning the first place of the best ideas of the province with the topic of intelligentizing navigation aid signs, as a technology core, he entered the science and technology park, which led to the start of specialized activities and field research in the field of ports and vessels. With the establishment of the company in 1997, the company succeeded in designing and building the first example of the hopper gauge system for dredging vessels and signing a contract with Amirabad Port and Khat Darya Bandar Company. Regarding the opening of this project with the presence of the CEO of the Ports and Maritime Organization and emphasizing the smartening of 8 private dredging vessels of the Ports and Maritime Organization, this company started its activity with a team of 10 people. The scope of all monitoring and control systems of these vessels. Finally, it led to the design and manufacture of four products: 1. Non-nuclear density meter 2. Hydrography system 3. Gauge funnel system 4. Floating draghead monitoring system for the first time in the country and was able to become a part of knowledge-based companies

Monitoring system

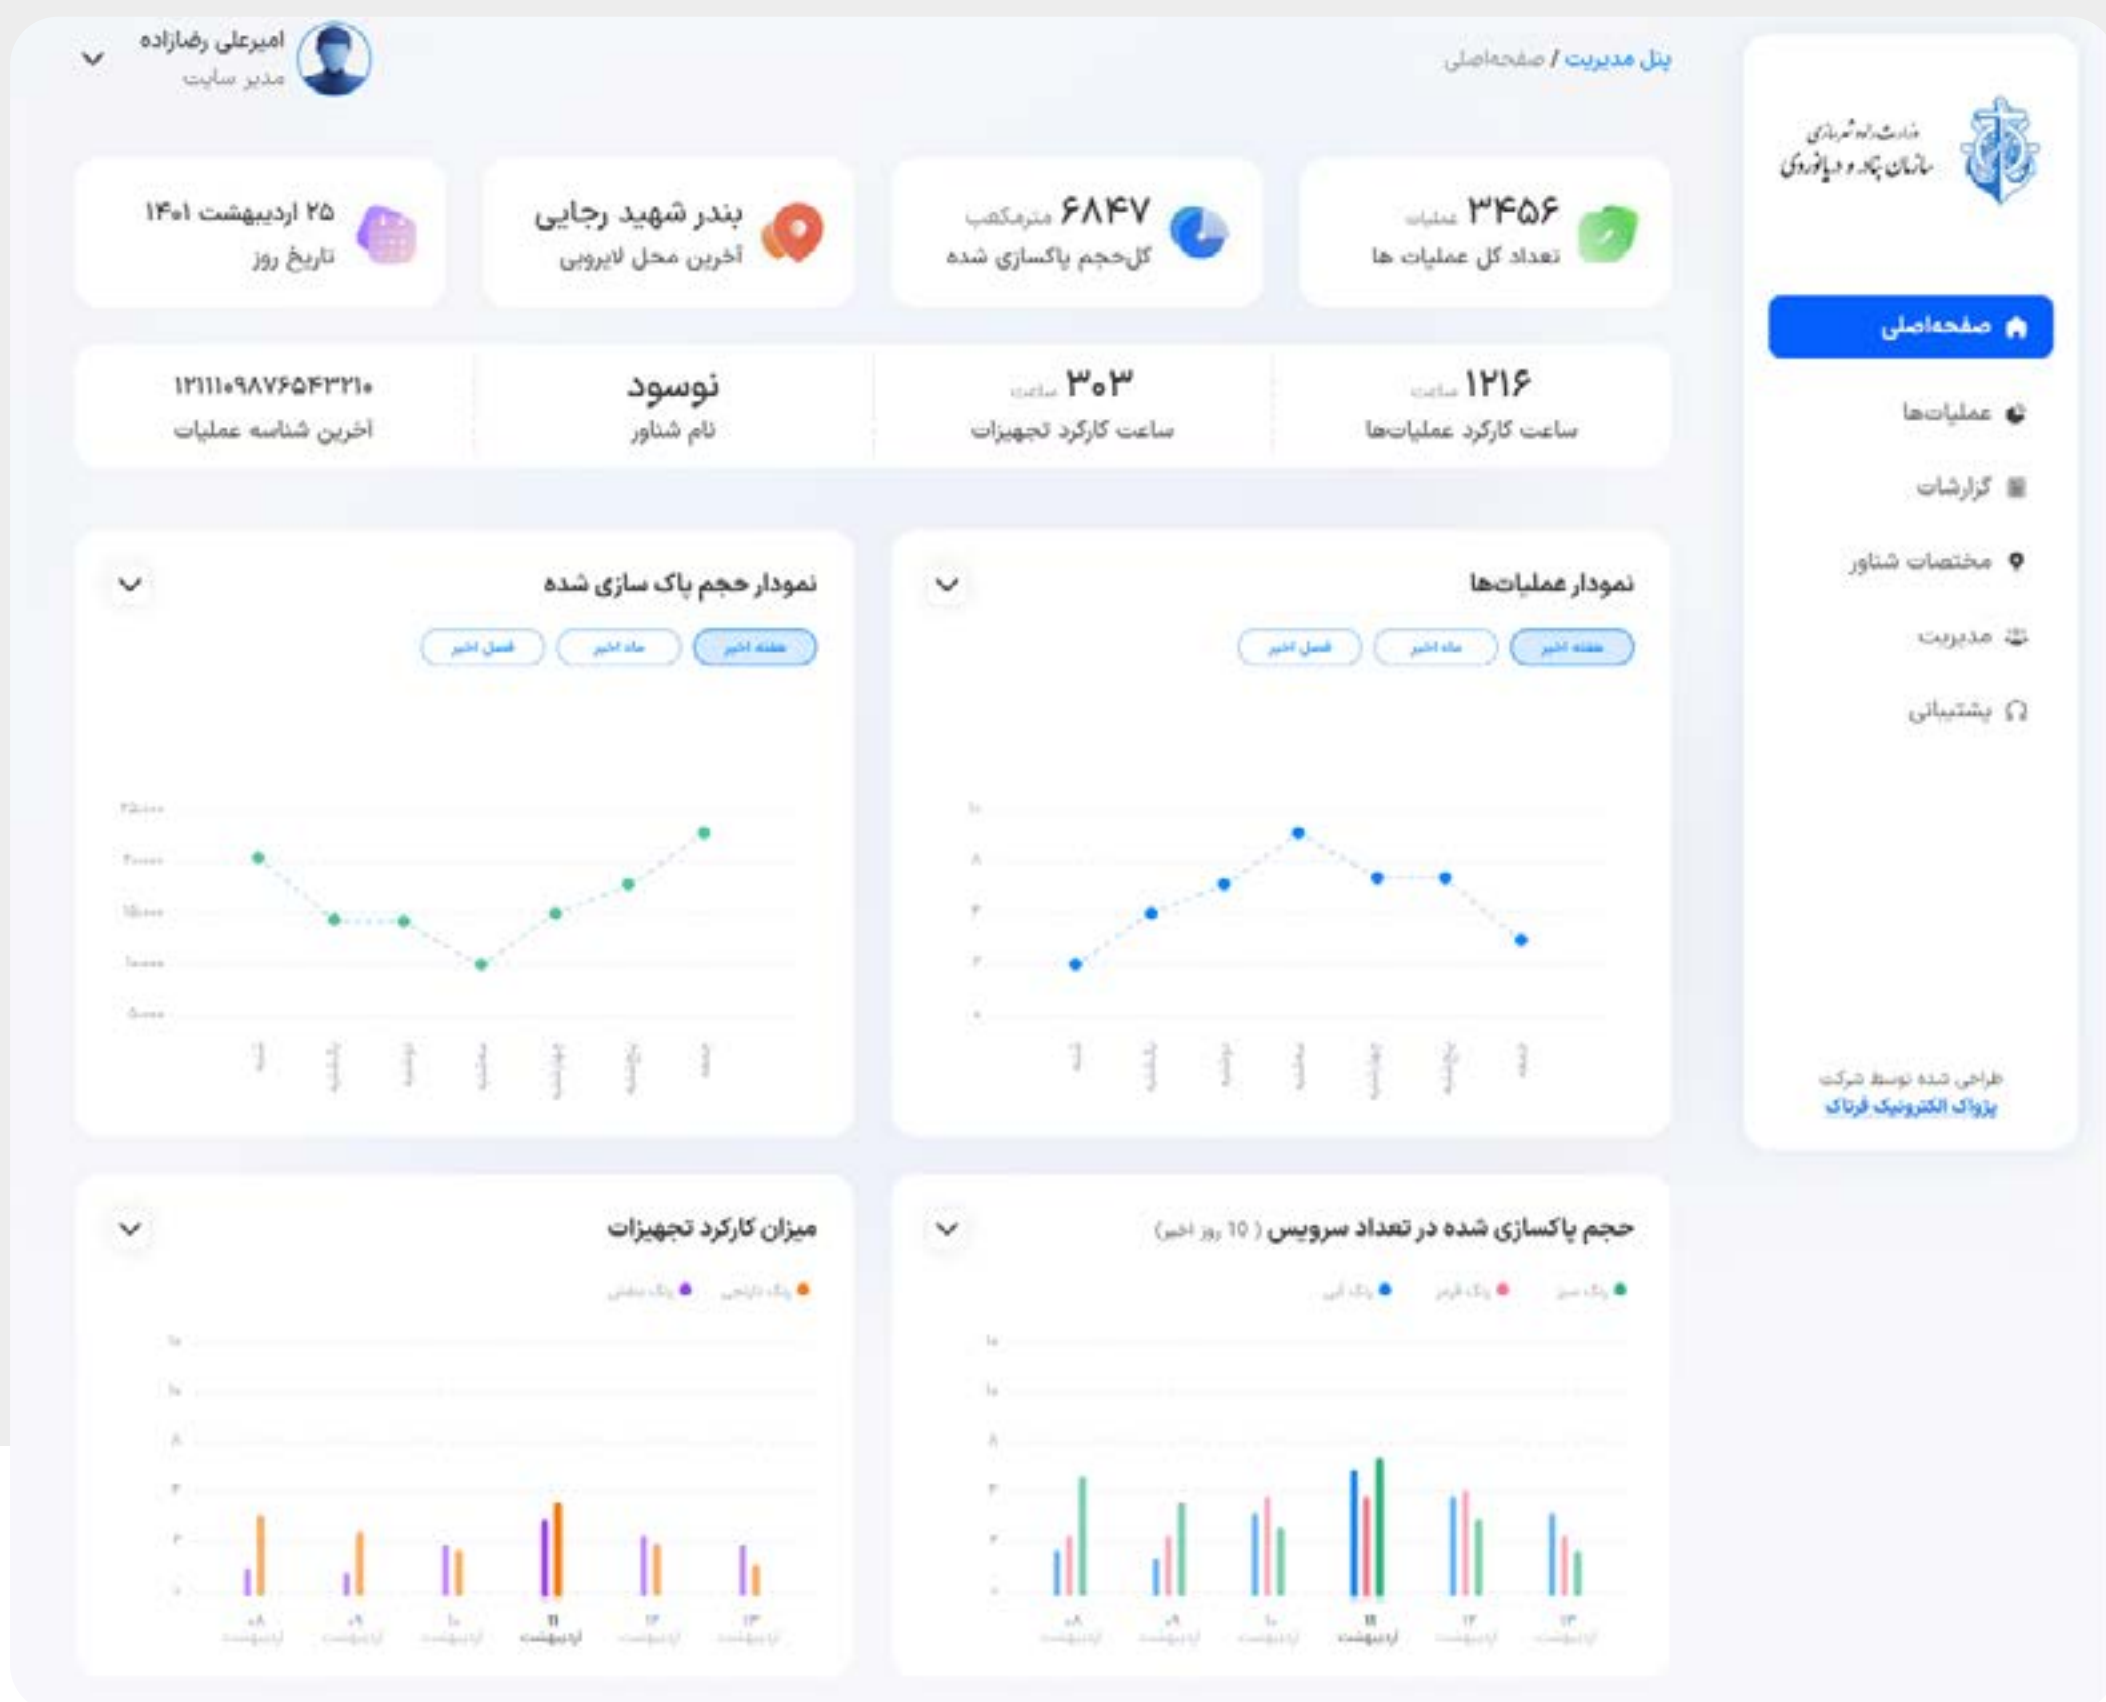

Management system

Profile features

The 60 series profiles are very high quality and resistant, which are produced using the latest European technology and machinery. By using the best and highest quality raw materials and additives from reputable brands, this profile has excellent compatibility with different harsh weather conditions. Shafer 5-channel profiles have a cross section of 60 mm, and the presence of TPE rubber in the frame increases the weldability and insulation of the window. Zovar's design is also highly flexible and has very easy installation conditions, and Zovar's sealing rubbers are injected with COEXTROD technology at the same time as the profile production process, which makes it a very suitable insulation for windows with a long lifespan.

Colored laminate profiles

Due to the color of raw materials, UPVC profiles are mainly produced on the basis of white color, and this whiteness and transparency also varies according to the formulation and quality of raw materials and combinations of materials used in a company, so that compared to the products of different companies The difference in color and transparency is quite noticeable. In the Arta Profile factory, it has been tried to use the best raw materials to produce profiles in white color and with the maximum possible transparency and supply them to the consumer markets. Also, in order to satisfy our dear customers and to meet their needs in the design of building facades, it has produced colored and laminated profiles in different designs and colors with the best possible quality.

About the company

Koch Savalan Trading Company

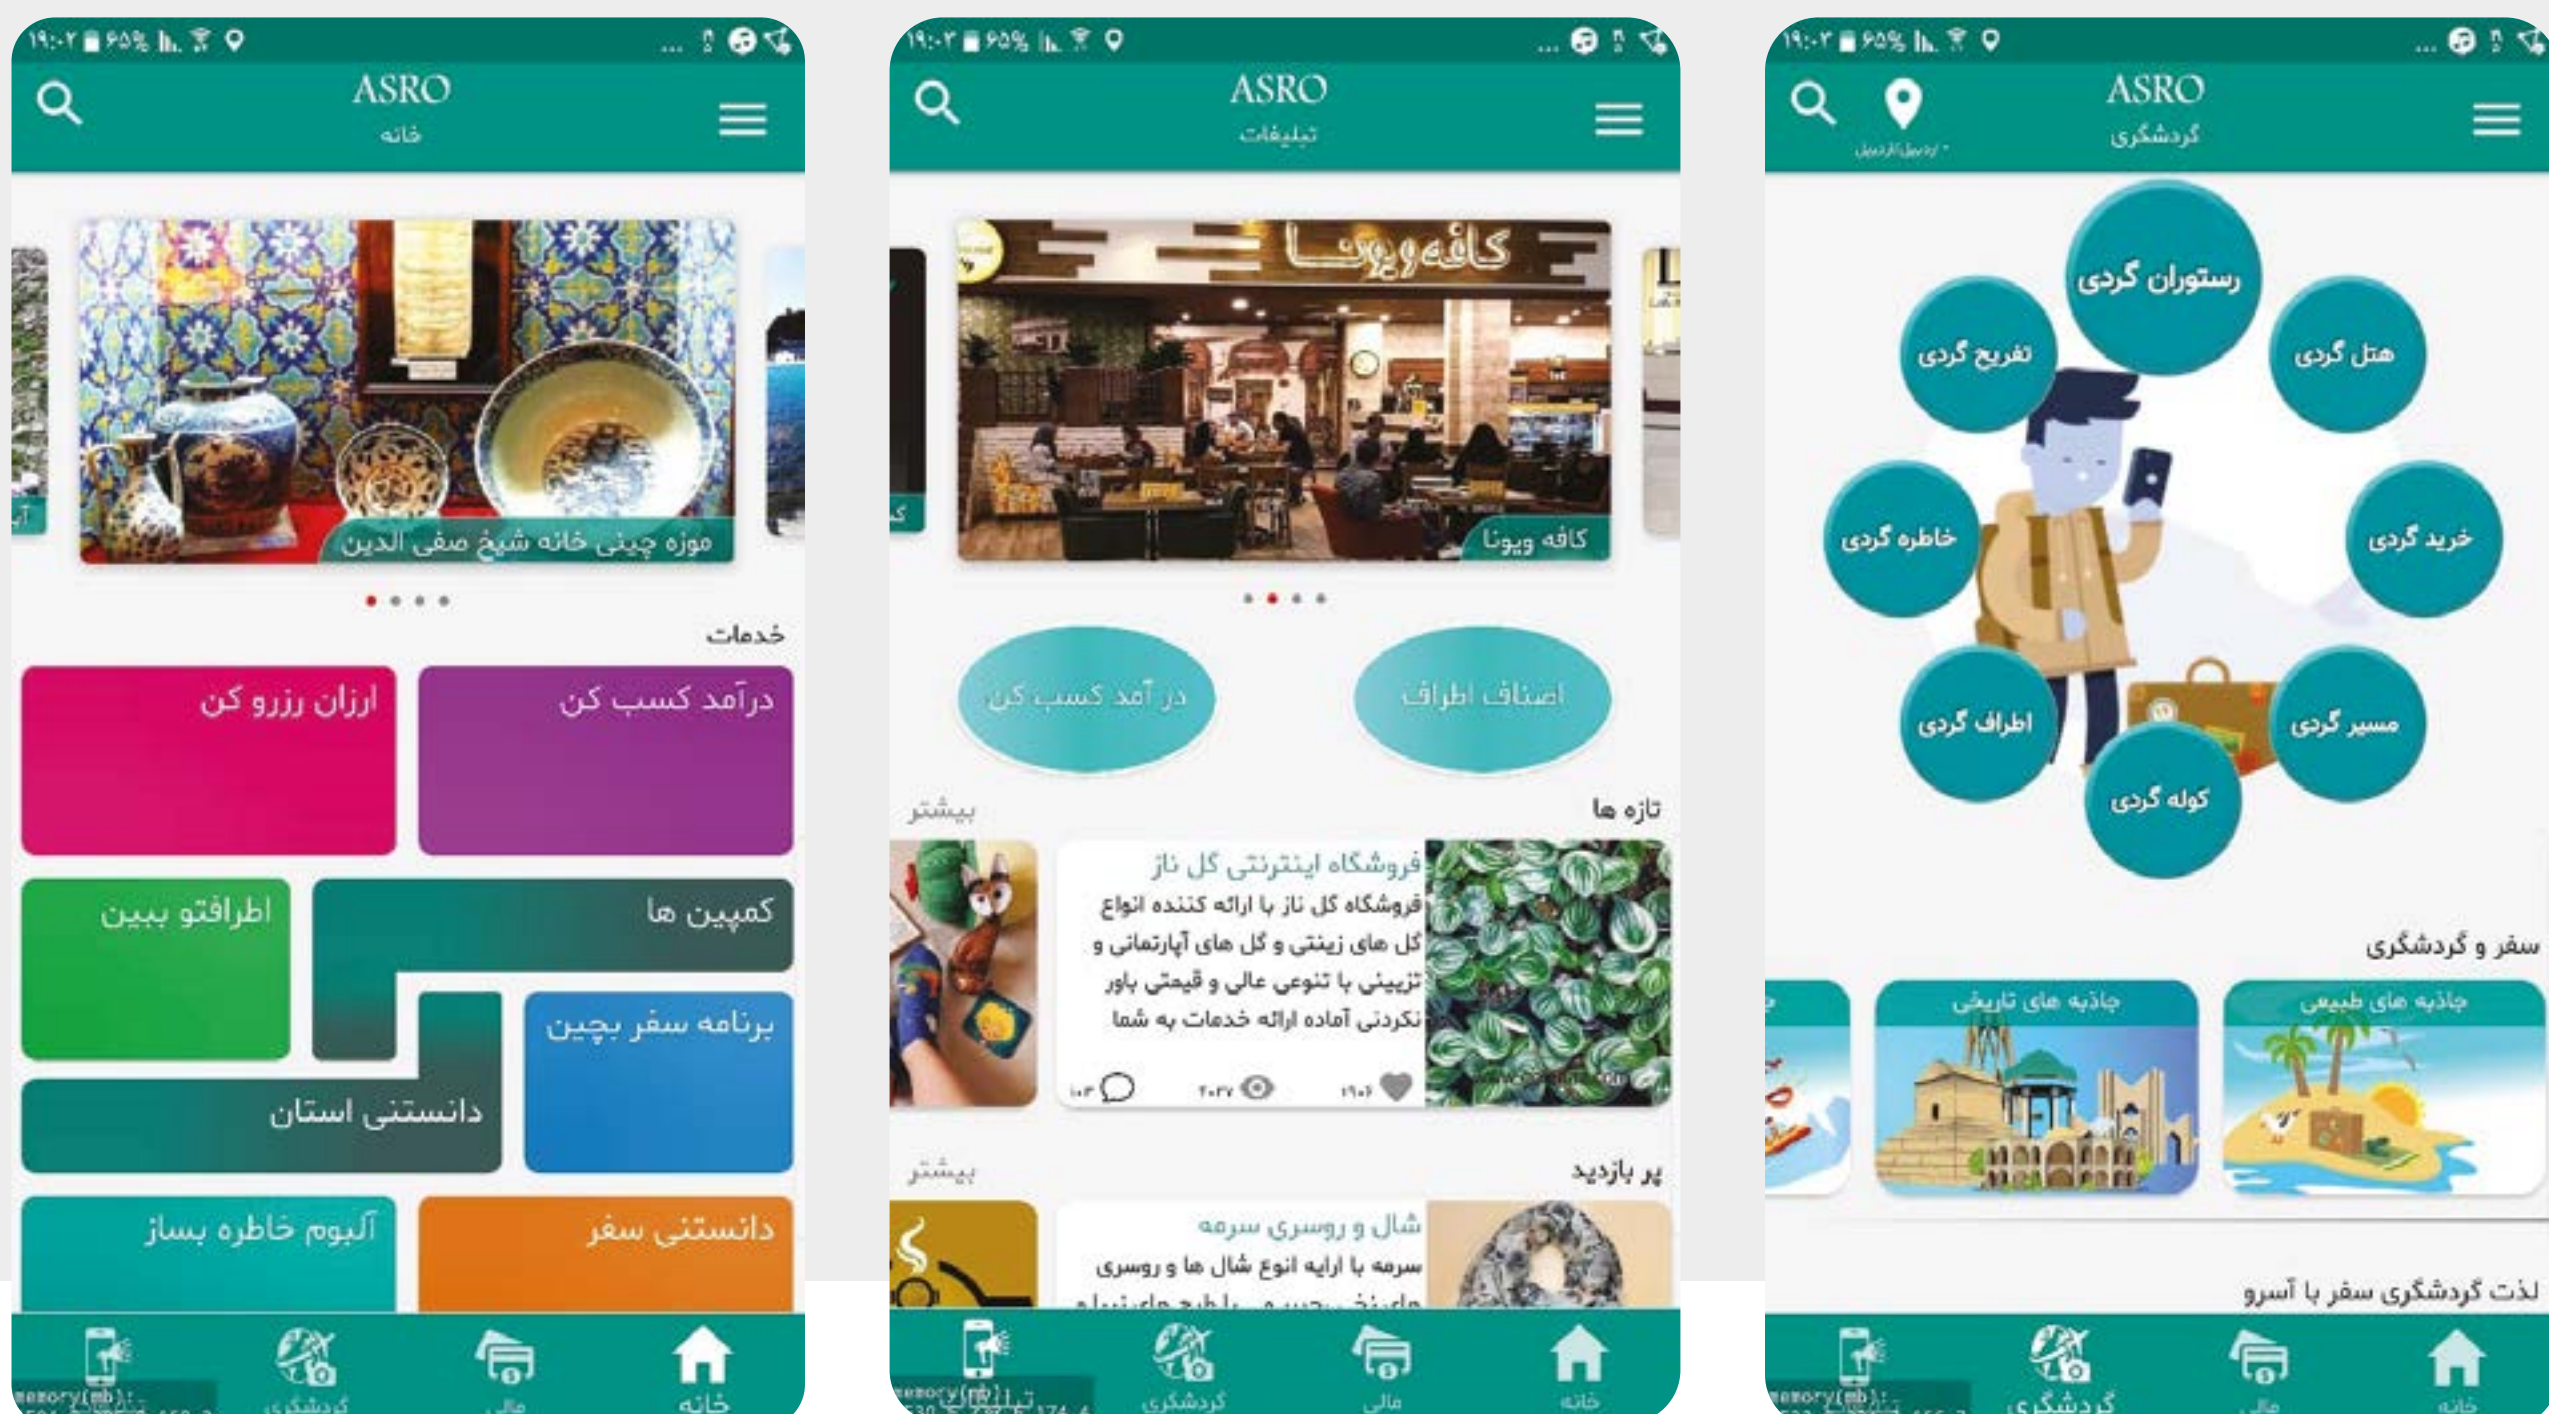

Koch Savalan Trading Company was registered in January 2018 and registered in April 2018 by a professional team including 6 programmers, 4 marketers and 2 specialists in administrative and executive affairs were established. The members have been working on the ASRO project since 2014, which is a comprehensive and practical application in the field of technology, and after research and development for three years, we were able to plan and compile the project in 12 main phases and 190 auxiliary phases. Then, from October 2019, we started to implement its initial phases and write the Asero application code, and finally, in June 2018, we were able to put 3 main phases and 5 secondary phases into operation and make it available to the public from 10 June 2018. .At present, Asero application has 3 main phases and 14 auxiliary phases, and during this time, we have been able to commercialize the ideas in Asero and reach 23 thousand users in a period of 2 months, and the daily growth of the number of users is close to Reach a thousand users a day

our services

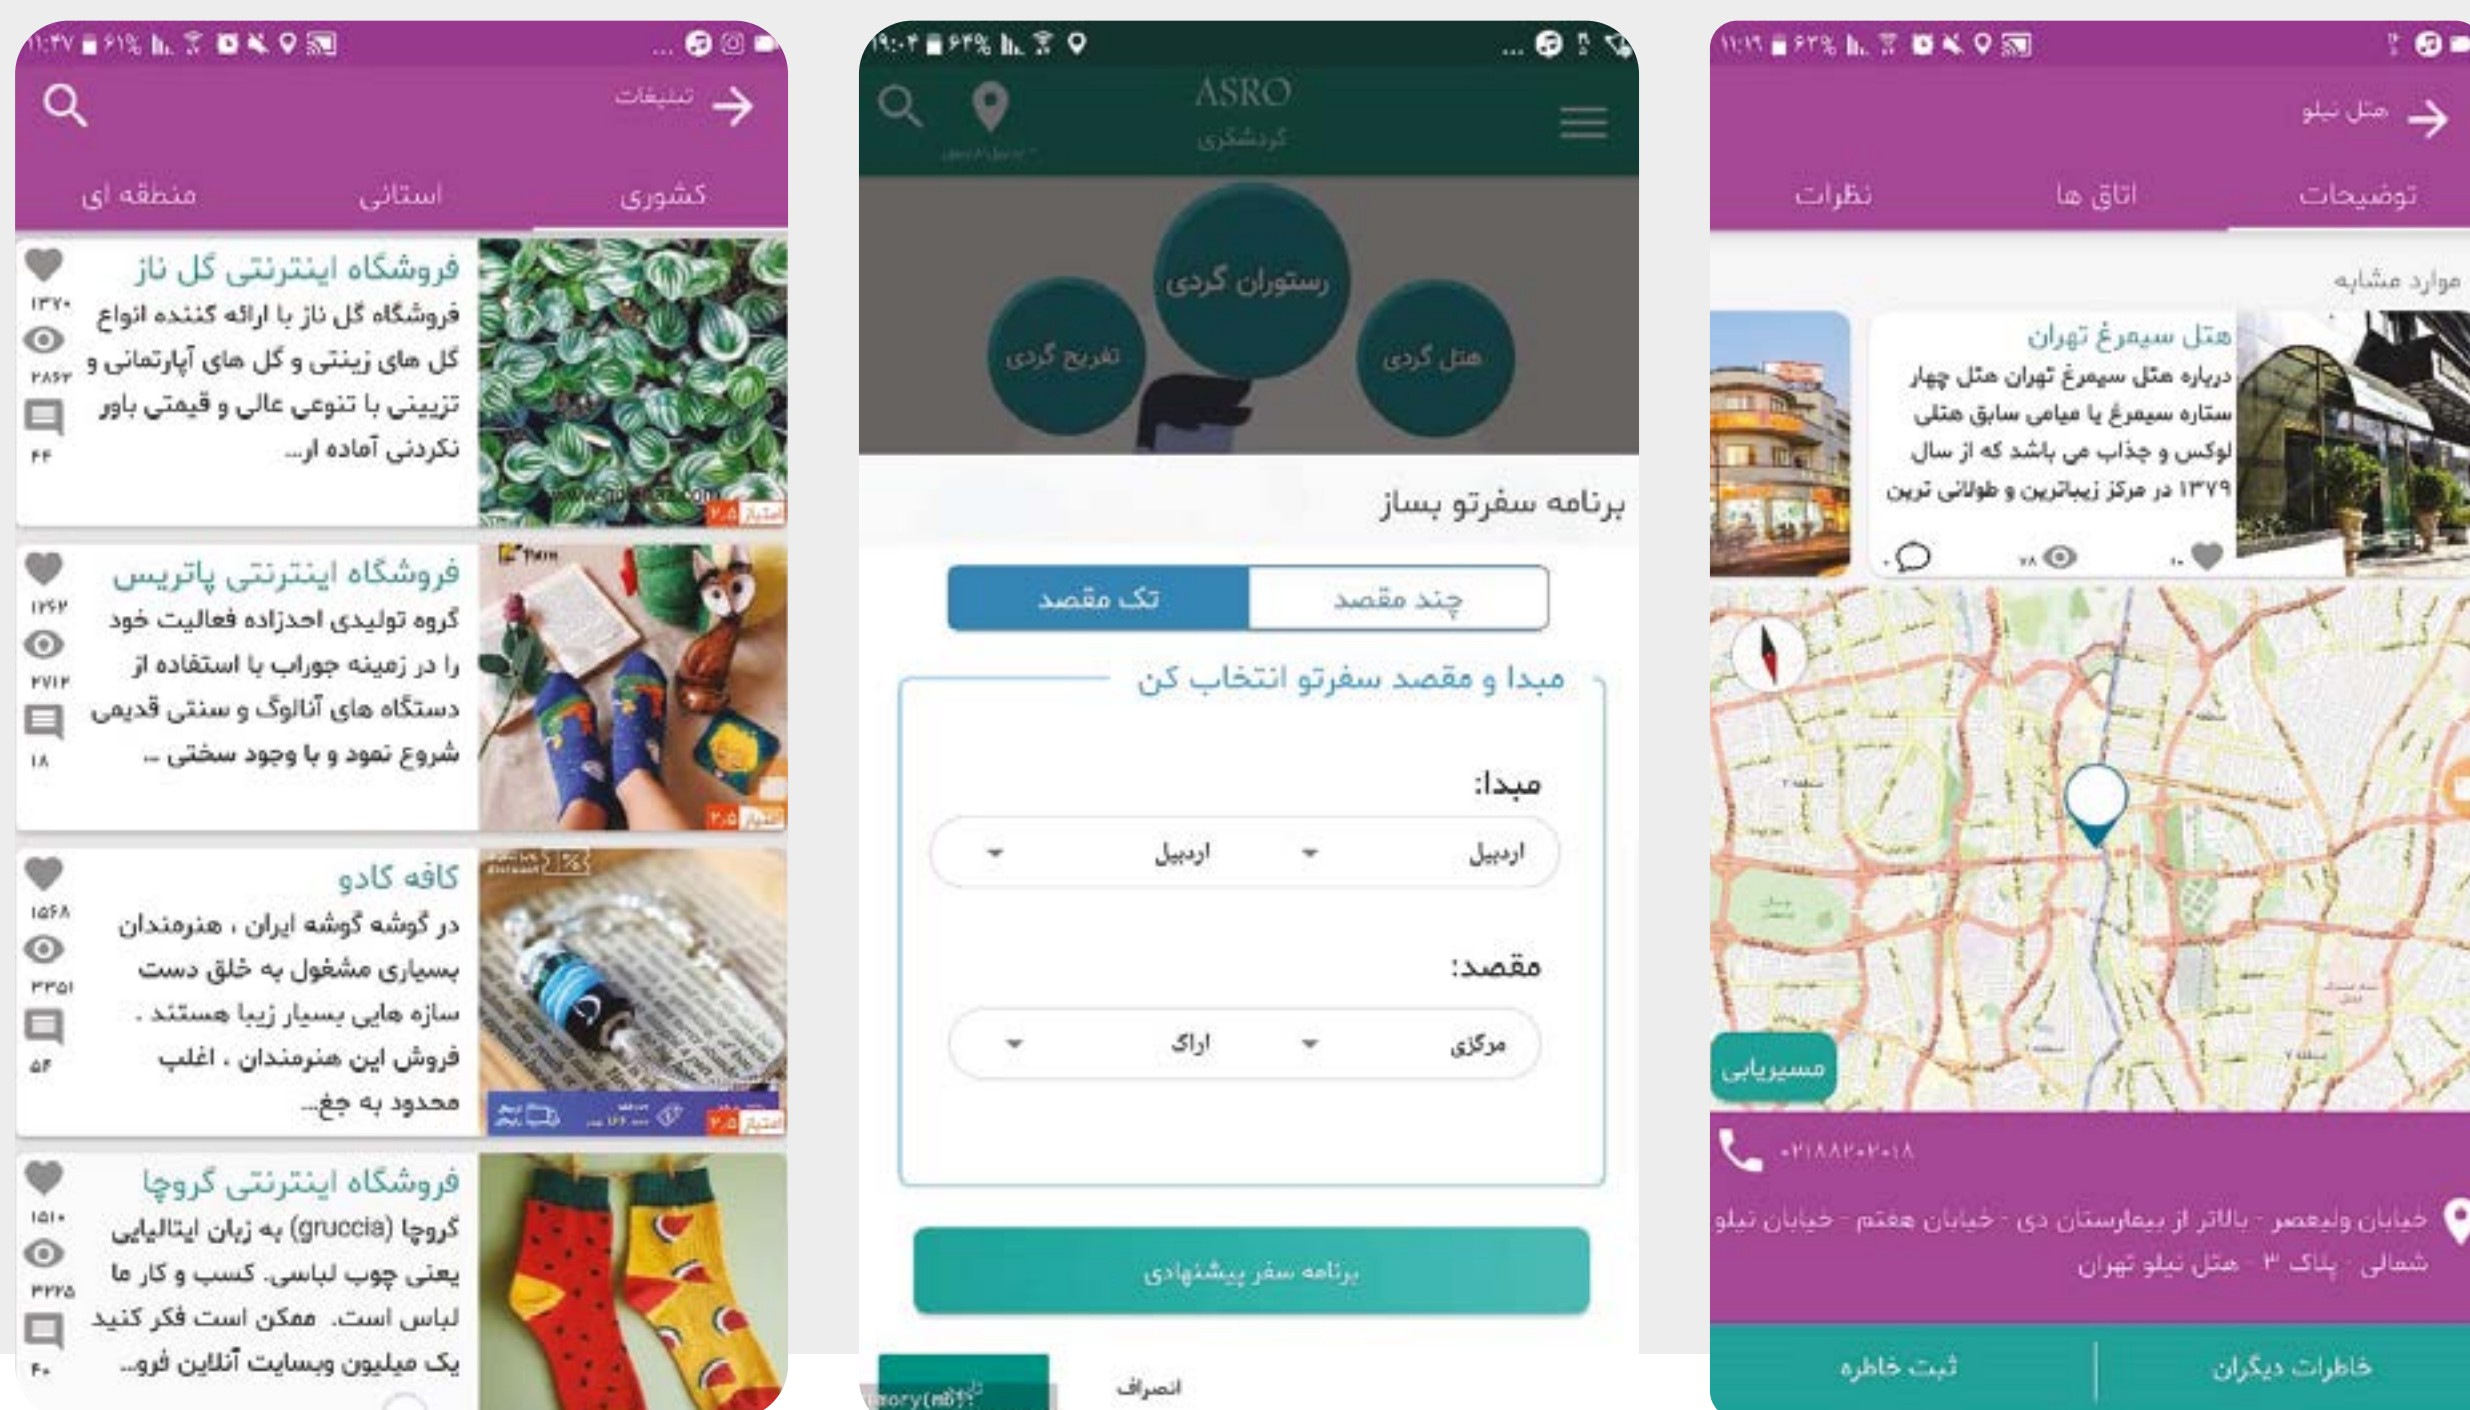

vision

our services

The services we currently provide in Asero:

1. Tourism and entertainment database of all regions of Iran in several international languages
2. Solving the concern of the tourism triangle
3. Online reservation automation system and ticket preparation for (accommodation, concert, restaurant, fast food, tourist tours, hydrotherapy and swimming pool, doctor's office doctors, bus, airline)
4. Making travel plans
5. Earn money online
6. Creating a super smart platform for advertising guilds
7. Creating a memory album in the cloud

vision

Our vision is to provide the most comprehensive services in the field of e-commerce and above the expectations of users, the quality of services and the satisfaction of 95% of users.

* Increase our users to more than 2 million people inside the country and more than 1 million users in foreign countries.

* By creating an active agency in neighboring and European countries, we will attract medical tourists and increase this number annually. Let's reach 10 thousand people.

* Launch an advanced algorithm of artificial intelligence so that it can behave with users in accordance with the psychological and personality principles of users, and present its suggestions to users with the same mechanism.

About the company

Artan Shahir Medicine Technology

Artan Shahir Poultry Medicine Technology Co. started studying and formulating it in Iran since 1994 and at the same time as producing the new generation of poultry vaccine stabilizers (protectors) in the world. The country's veterinary medicine managed to get the license numbered 341-98-s. The formula of this drug has been registered as a patent in the Patent Office of the Industrial Property Organization. The company was also established in the science and technology park through the establishment process and is currently researching several other knowledge-based drugs that do not have domestic production, which will start to be distributed nationwide after the approval of the country's veterinary organization. Collaborating company: Blueguard is produced under contract and by order of Teb Tayor Pharmaceutical Technology in Azar Aria Daru Pharmaceuticals.

Why Blueguard?

- Not using protein of animal origin
- Lower dose and greater effect (every 10 grams is mixed in 100 liters of water)
- Full and maximum protection from the harmful effects of the vaccine for at least two hours
- By creating a buffer state, it provides the best pH in the vaccination water, which is 7 to 5.7.
- It is easy to trace the flow of vaccination water in drinking water lines.
- Removes the negative effects of heavy metals such as iron, bromine, copper, etc
- It has at least three times the speed of action compared to similar foreign products, and as soon as it dissolves in water, it is ready to receive the vaccine without waiting for water.

About the company

Azma Process Technologies Trade Group

Starting from 2016, with the aim of helping to achieve the technologies needed by the country and reducing the country's dependence on foreign countries, relying on the scientific abilities of researchers and elites who graduated from the country's first-rate universities, has been operating. The first mission of this company was to identify the problems and technological needs of the industries and researchers of this region and to plan for the continuation of the company's activities according to these issues. With the divisions made, the problems and needs in the field of new technologies, including nanotechnology, were investigated. The result of these investigations was the design, construction and production of general and specialized laboratory equipment with the aim of investigating and engineering the properties of various nanostructures. This equipment can be used in the fields of making nanostructures and checking the optical and electrical properties of these materials. Due to the embargo conditions of the country in various fields of technology, this company has planned to continue its activities based on helping the industry in order to meet technological needs, including laboratory and workshop equipment.

Company Services

Azma Process Technologies Trade Group

We are ready to cooperate with :

1. Providing services to industrial and research complexes of the whole country
 2. Providing products from the company's product portfolio
 3. Cooperation with the research and development complex as well as the quality control laboratories of industries to meet the existing needs of these units
 4. Troubleshooting and repair of laboratory and industrial equipment
- Automation and updating of old and depreciated equipment and devices
5. Design and manufacture of laboratory and industrial equipment
- Defining and carrying out laboratory and industrial projects in order to achieve the set goals

Products

Azma Process Technologies Trade Group

Our products include:

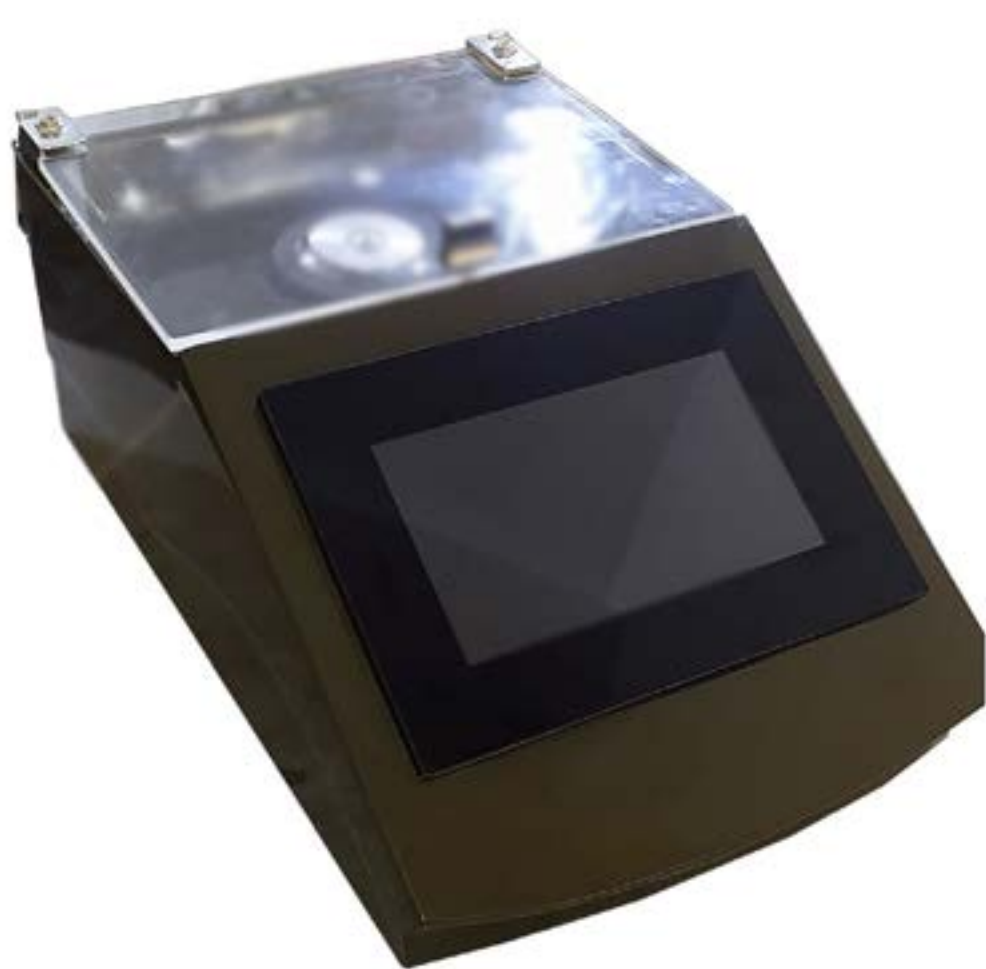

1. Hydrothermal synthesis autoclave reactor
2. Low temperature nitrogen gas cryostat
3. Smart high speed centrifuge
4. Rotational address layer
5. Laboratory oven
6. Sunlight simulator
7. Photocatalytic process chamber
8. Laboratory chiller (temperature controller).
9. Magnetic stirrer
10. Electric heater
11. Mechanical stirrer

About the company

Imen Pardaz Co

We entered the field in 2013 with the aim of operating in the field of software, and along with the growing growth of the ICT industry in the world, we specialized in web-based services. The projects being implemented or implemented by this company with multi-layer architecture (n-tiers) based on object-oriented concepts and using engineering tools for designing and building software and paying attention to international standards of planning and creating and have the ability to adapt to the specific systems of any organization. With long-term perspectives, this group has taken a big step in research, production, supply and support, and has always placed customer focus at the top of its work and tries to provide better services for customers. Resource planning Today's organizations are competing for globalization so that this competition has reached unprecedented levels. In global competition markets, organizations need to find better business solutions with more flexible and reliable structures. Many organizational infrastructures and formations have been empowered by information systems. By managing these processes more effectively, competitive advantages can be obtained by reducing costs, increasing production and improving customer service. In the last two decades, there has been a special trend towards centralized solutions that improve work processes.

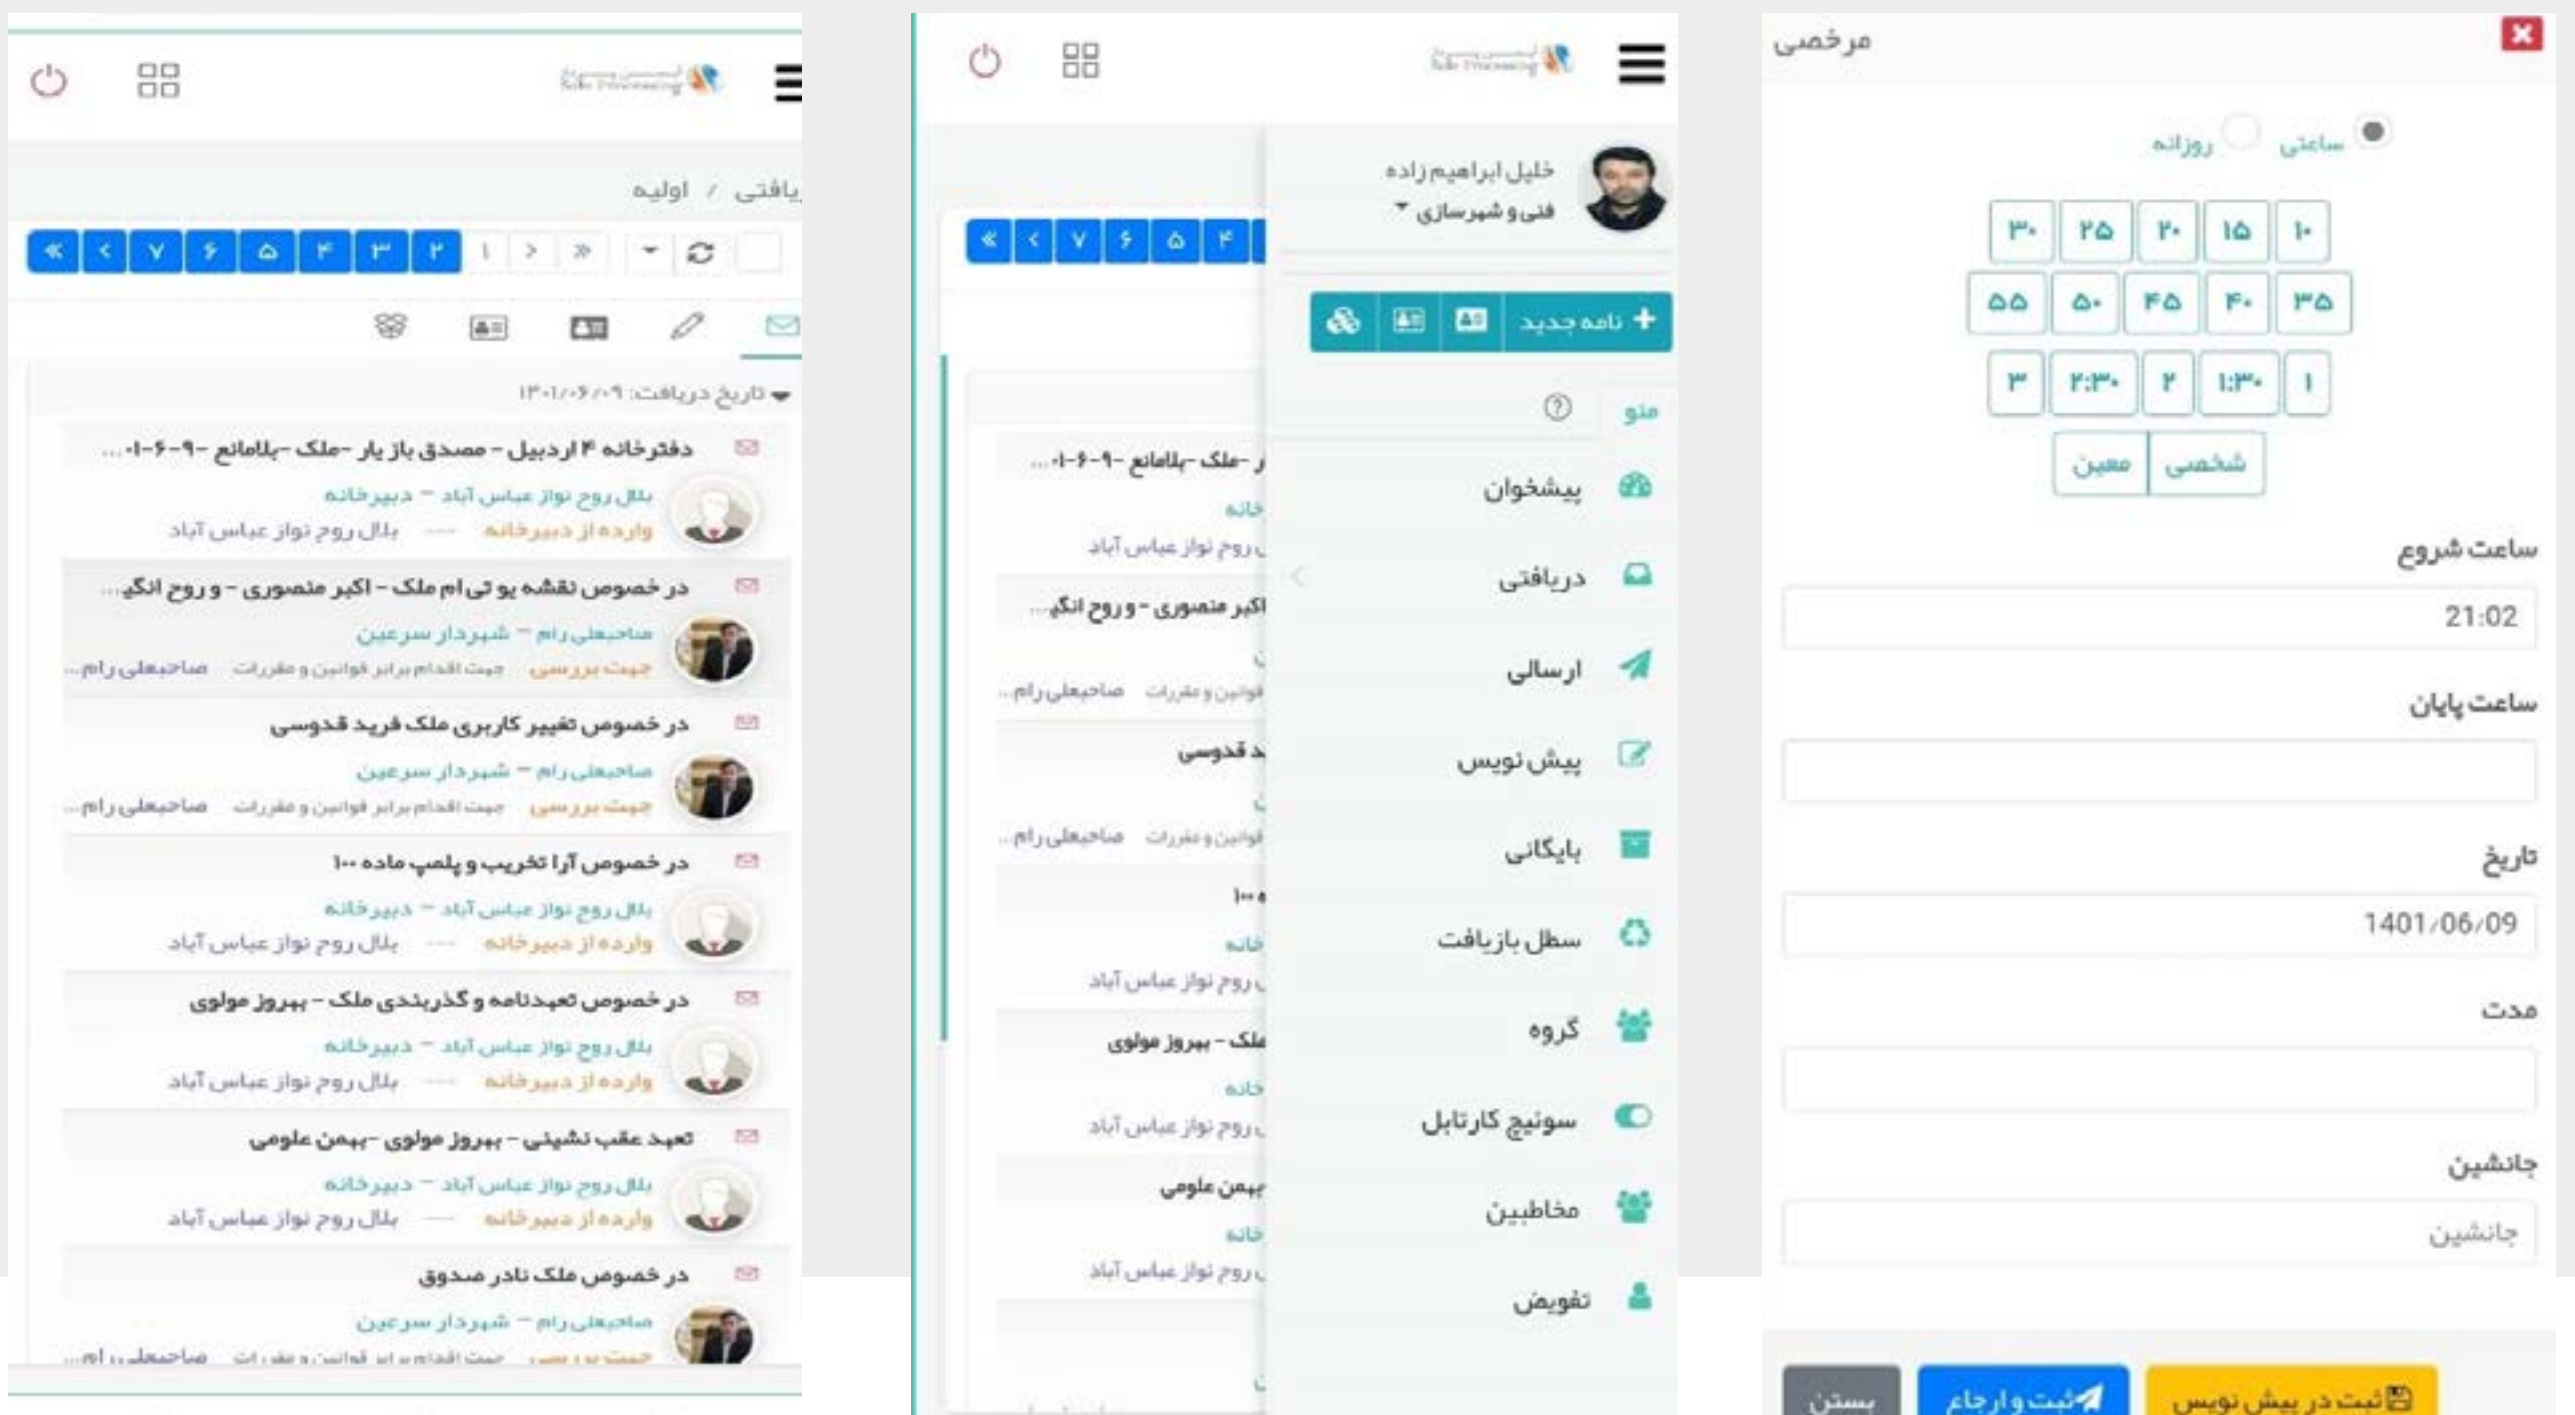

Web automation

Some important features

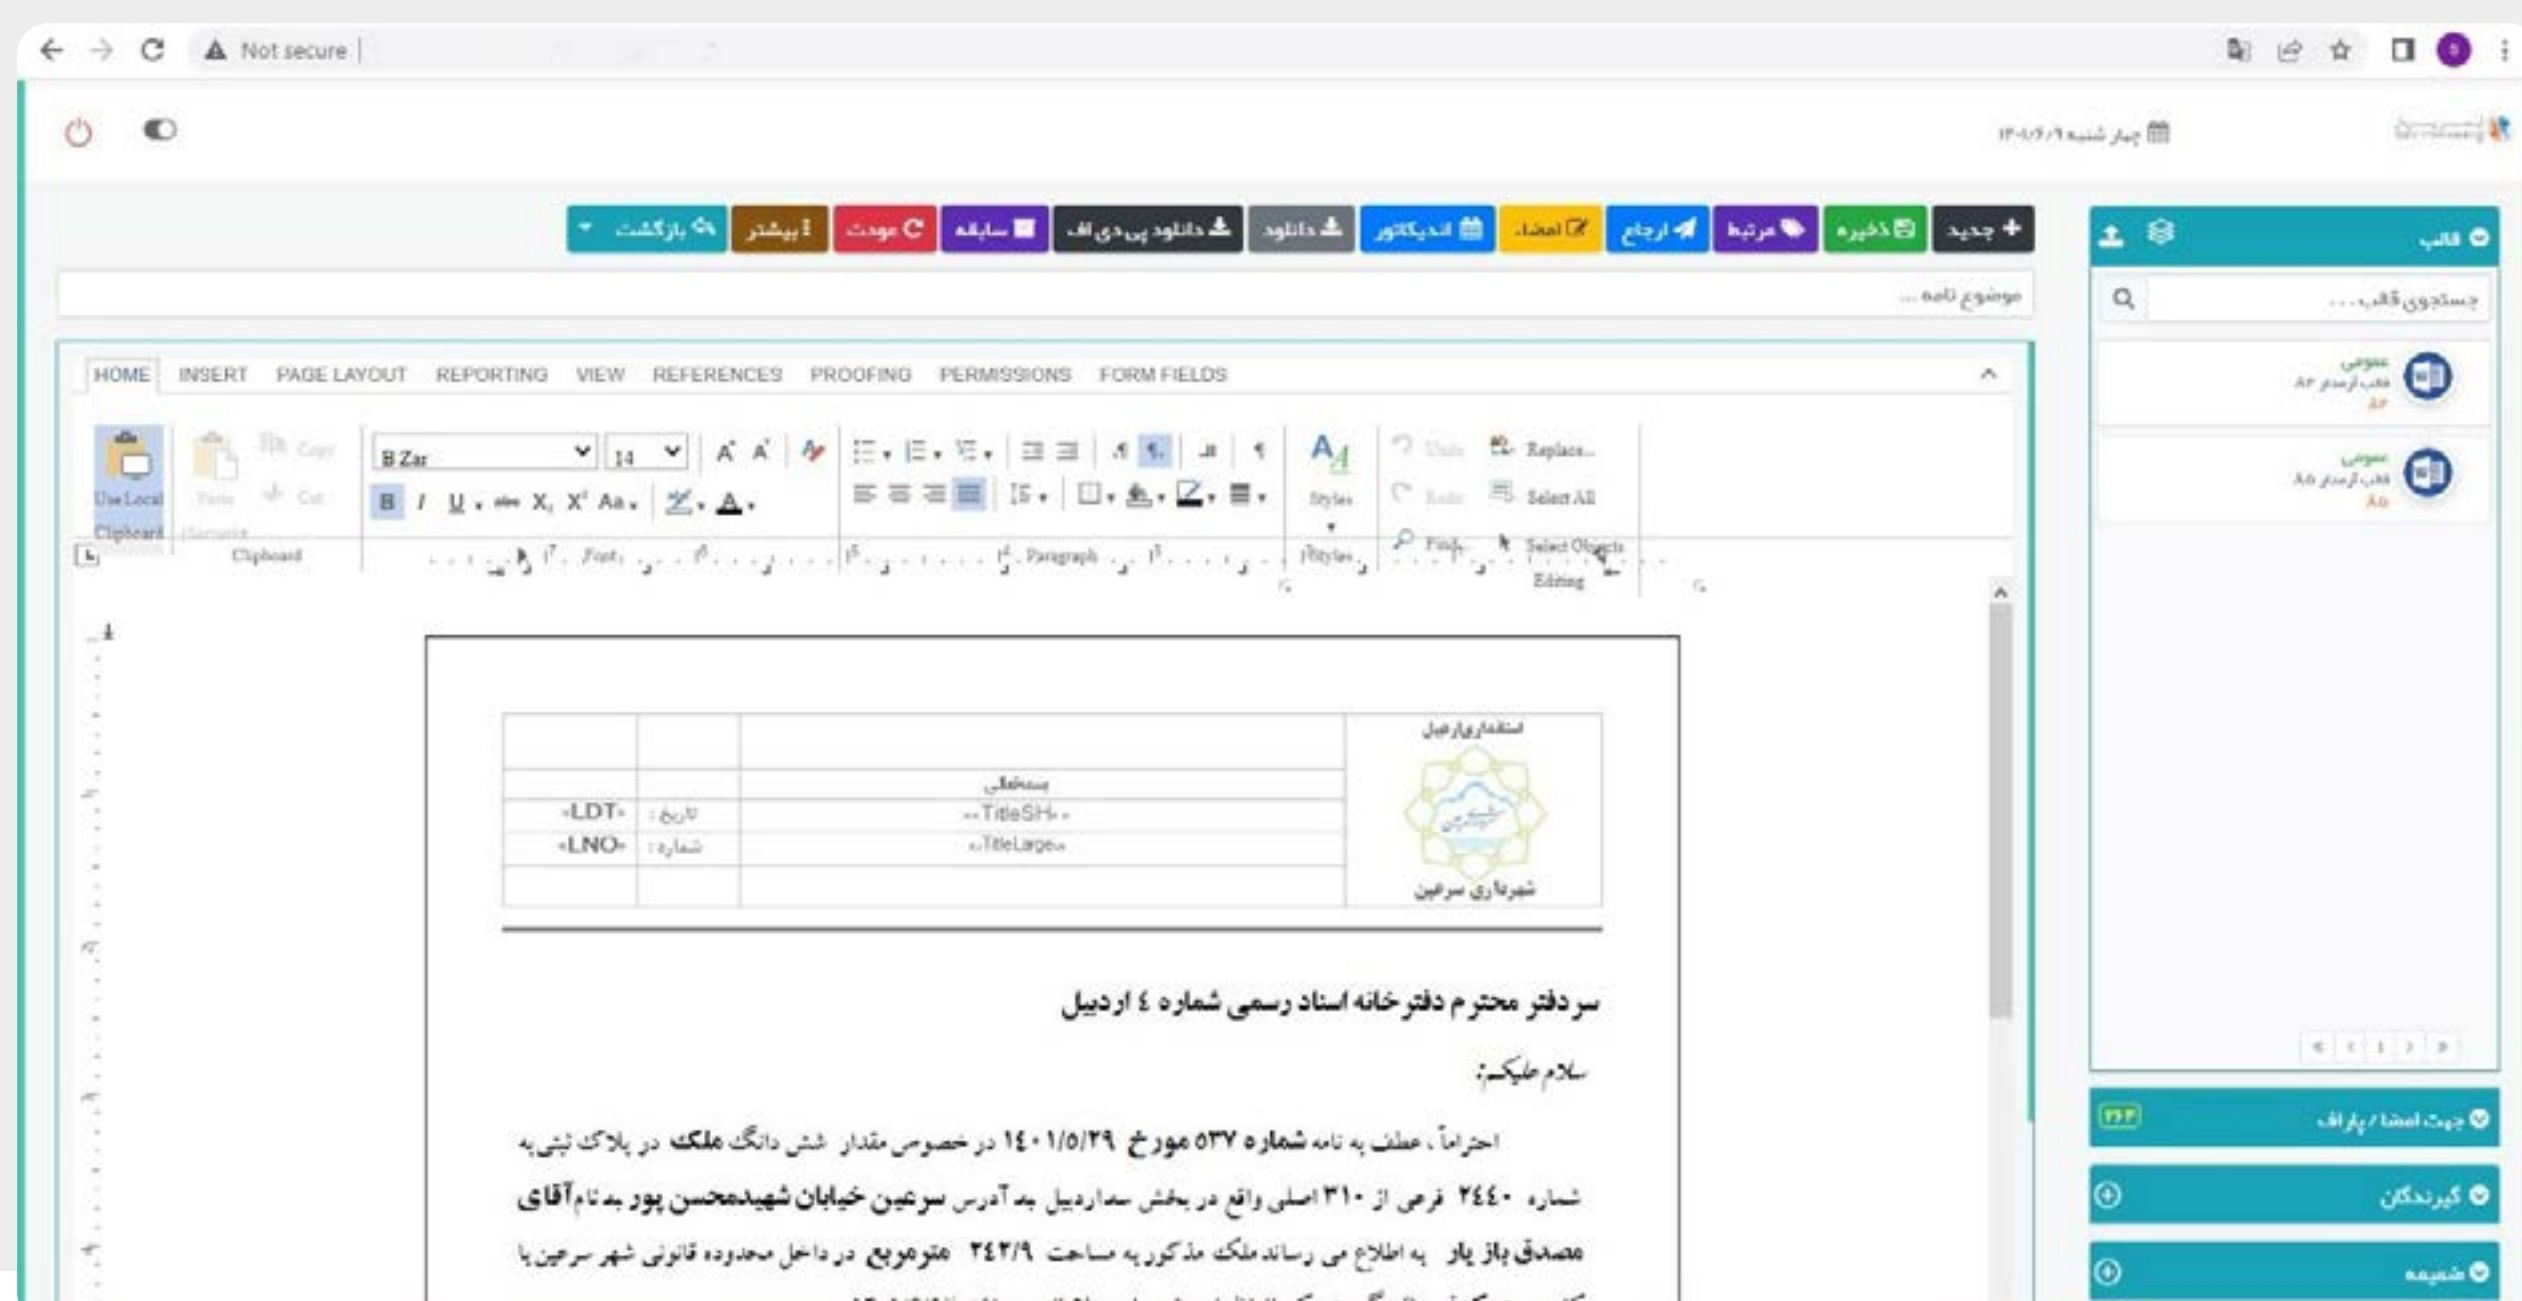

Budget and credits

Web automation

Integrated administrative and financial systems of Office Yar is a thinking, technology and system for more effective management of all resources in an organization. Office Yar allows organizations to better manage all their resources and reduce costs and increase efficiency through the integration of all information among different work processes. This software is under LAN network and web and has high speed and security. All those who have username and password in this system can log into the system from anywhere in the world and view their mails. do They can initial the letter and send it to someone else for action. without needing to be at their workplace.

Some important features

1. It is completely web-based and can be used in all browsers
2. Applicable on all operating systems (Windows, Android, iOS, etc.)
3. Running word on the browser without installing office
4. Image to text conversion when scanning received mails so that it can be searched and retrieved (OCR)
5. Alarm display when receiving a new mail (using socket programming technology)
6. Support for more than 50 formats and no need to install additional software
7. Has a simple environment that makes work easy for users and has high security
8. Ability to view employee salary slips in a personal folder and link to the payroll system

About the company

Saroj Industrial Group

Saroj Industrial Group, as a leading company in designing, manufacturing and producing all kinds of construction products, started its activity in 2016 and succeeded in setting up the most modern industrial units in the northwest of the country with foreign currency and Rial investments. The first phase of the Azar Saroj factory in Ceylon with a daily production capacity of more than 500 cubic meters of autoclaved ventilated concrete blocks was put into operation in 2012 and the second phase of the factory with a daily production capacity of 200 dry tons was ready for operation. Mortar was put into use in 2021. This company has an important contribution in creating employment in Ardabil province with direct employment of 300 people. Phase 3 of the industrial group of Aria Saroj Khavaran machinery factory in the field of manufacturing equipment and production lines of modern construction materials, precise mechanical parts and installation and contracting operations since 2014, located in Tabriz city, phase 4 of Saroj industrial group of Azerbaijan industrial lime factory was put into operation and processing Limestone with a daily production capacity of 400 tons has been started in Ardabil since 2018. Phase 5 Saroj Sabz Caspian Industrial Group has started working in the field of precast concrete parts production in Gilan province since 2022.

Autoclaved concrete

dry mortar

Sales service

Autoclaved lightweight aerated concrete

This product with extremely attractive technical specifications is widely used in the world due to its significant advantages compared to other hard construction materials. Saroj loks are cm high and can 25 cm long and 60 be produced in different thicknesses cm. Depending on 2.5 cm to 10 from the customer's order, special sizes can also be produced. These concretes are environmentally friendly, have excellent thermal insulation and very .high resistance

Next page

► Dry Mortar

Dry mortar is produced from the combination of the three main cement materials and chemical additives with a fully automatic pre-mixed mixture with weighing accuracy and extremely high quality with improved and customized properties and priced according to the consumer's needs. Modified thin layer mortars Polymerized mortars are a special type of masonry unit mortars that are also used for aac blocks. Reducing the thickness of the mm is one of the features of this mortar compared to when 3 to 1 mortar to mm is used. The important 15 to 10 traditional mortar with a thickness of advantages of using these mortars compared to traditional mortars include quality control and product production based on different applications and desired size, reducing human error in implementation, reducing costs, and preserving the environment. Consumption is supplied

About the company

Negargaran Sepid Naqsh Mehban Company

Negargaran Sepid Naqsh Mehban Company (Amai brand) officially entered the field of 3D tile and panel production for interior decoration in 2015. This company offers different designs (modern, classic, traditional) for all types of residential, commercial, service, medical, administrative and religious buildings. These 3D panels have a very smooth and polished surface that can be painted and even patinated, and it is possible to finish the surface with gold or silver leaf. Also, due to its very low and suitable weight, it can be installed only by using antique stone glue, and it does not need any special foundation. The production of these products is done with the highest possible quality and with special export packaging, it has the ability to be sold and sent to all parts of the country and neighboring countries.

About the company

Ashja Battery Industrial Group (Aco Battery)

Ashja Battery Industrial Group (Aco Battery) with more than four decades of experience in battery distribution, established its activity in 1982 and continued its activity in this field by obtaining representation from reputable domestic and international companies. This company was introduced as the largest nationwide distributor of batteries in Iran during the years 2013 to 2019. In 2017, according to the needs of the market in the Iran and the Middle East, Aco Battery established a production plant by relying on the technical knowledge of its Employees and domestic and international consultants from Germany and Turkey. The first phase of this factory was put into operation in 2018 and it was able to successfully pass the experimental stages of producing plates with Expanded Metal technology and enter the production phase. In 2019, this company succeeded in launching all stages of the production chain in 3 phases of scrap battery recycling, plate making and assembly and battery charging in the factory, which led to the production of starter batteries in various amperages and sizes from 50 to 200 amp hours with Tinoo and Carpile brand names. In the continuation of the process of expanding the production of its products, during the studies and researches of the research and development team, with the cooperation of experts in this field from Germany, Turkey and China and using the most advanced technologies in the world, in the summer of 2021, it succeeded in producing a variety of Industrial batteries (sealed lead acid) with the brand name Ufo. Quality tests with current European standards as a constant approach for Aco Battery Company, places this company among the most up-to-date quality control laboratories in the country.

About the company

Rasamehr company

Registration number: 13013

CEO: Kamal Yavarian

National Company ID: 14006431346

Amon Gostar Rasamhar Company was established in 2015 with the aim of operating in the field of energy consumption management, especially in the lighting industry, by a group of faculty members and university graduates with the approach of fifth generation universities, and after going through the stages of growth and development in 2017 as a company. The knowledge base of the type of industrial production is the scientific vice president of Nayed. Currently, this company is the only manufacturer of LED lighting systems for the smart city with nano coating in Iran. The products of this company, relying on the technical knowledge obtained from learning science, experience and research, succeeded in obtaining two international IEC standards and five certificates and approvals from the University of Tehran, the country's lighting reference laboratory, especially for LED lights for roads, highways and highways. has been Due to the very rapid expansion of LED technology in the lighting industry, the research and development and commercial department of the company seeks to create the necessary infrastructure to meet the needs of other manufacturers of the country's lighting industry and exports in the horizon of its medium-term plans.

About the company

Dasht Zarin Ardabil Company

The title of technology

Production of mini tuber by tissue culture method

Specialized field of technology

1. Information and Communications Technology
2. Manufacturing (electronics, mechanics, mechatronics)
3. Nanotechnology and biotechnology
4. Agriculture and related industries, materials and new energies
5. Pharmaceutical and health industries
6. Construction and related industries
7. other

Introduction of technology

Dasht Zarin Ardabil Company

Current state of technology exploitation

1. Laboratory sample
2. Engineering sample
3. semi-industrial
3. Mass production
4. Other...

Introducing the plan

Production of healthy seeds free from any virus and disease

Scope of application

Use as the primary core of potato or mini tuber (Pre-Basic Seed) and in the following years it is used as mother seed classes (Basic Seed) in the form of Super Elite (SE) and Elite (E).

About the company

Arta Coal Industrial Production Company

Arta Zaghaf Industrial Production Company has been operating in the field of production since 2007, relying on the power of expert and committed forces and using the most equipped machines and production tools, as well as the highest quality raw materials, with the aim of providing products. With a quality beyond the standard, this charcoal is made from agricultural waste and the construction of various machines. Relying on years of successful experience and having a suitable quality assurance system, this company is able to design, produce and operate all types of coal machines, including all types of industrial coal furnaces and coal production lines, etc., to produce all types of coal, press , production of carbon, active carbon, wood vinegar, etc.) and other necessary equipment with the highest quality and safety standards and without any pollution. Also, the production of charcoal briquettes, barbecue, lemon, coconut, citrus, carbon, activated carbon, wood vinegar, etc., all production processes are under supervision from the moment the raw materials arrive until the final product leaves the factory. From the quality control personnel of Arta Gas Company. Contract . For the first time in the Middle East, Arta Zaghaf industrial production group has produced the knowledge of producing, processing and purifying wood vinegar from wood, sugarcane, walnut skin and pistachio, etc. in a completely indigenous and Iranian way. Arta Coal Company with more than 12 coal distributors and one of the coal exporters to the countries of the region under the Arta Coal brand plays an important role in the coal buying and selling market. Also, Arta Coal Company operates with more than 6 raw material locations in the country with the aim of buying and selling high quality raw materials at reasonable prices in all seasons and with any capacity.

RQ coal
production line

RQ model furnace

Dutch furnance

RQ model charcoal industrial furnace

This furnace is one of the newest industrial furnaces in the market, which was designed by the engineers of Arta Coal Company. It is made from 1 to 30 tons of wood. Having a super-smart PLC electrical panel with 81 cooking programs along with a 7-inch monitor (in industrial coal furnaces with a capacity of more than 10 tons) that you will have full access to the furnace by installing the application on your smartphone. Another feature of this Arsio Arta coal stove is that it can be placed in racks with an electric pulley for ease of use. Due to the presence of a heating floor system (steam boiler) on the floor of the furnace, no damage will be done to the floor of the furnace. And another feature of the cooking performance is %100 complete even without rawness, breakage and biting.

RQ Chinese coal production line

Arcio 800 compressed coal production line is one of the latest compressed coal production lines offered by Arta Coal Company, which is made using new technologies and high-quality materials. This production line is fully automatic and produces high quality coal. Arcio 800 compressed coal production line is the first fully automatic device in the Middle East without pollution and has a PLC central panel with a 7-inch touch monitor and microcontroller through HMI and has an intelligent system for detecting defects and troubleshooting the device and has a display system to detect the amount of raw materials.

Next product

Dutch furnance

The Dutch model industrial coal furnace is one of the best products of Arta Coal Company, which has a patent from Arta Coal Company, and Arta Coal Company has been producing industrial coal furnaces with this model for more than 10 years. . Dutch model charcoal grill with a capacity of 1 to 30 tons of wood and with three models of traditional design, traditional industrial design and industrial design, and this multi-purpose oven is for cooking all kinds of grilled charcoal, citrus fruits. , briquettes and even bleached charcoal. . In the industrial furnace of the Dutch model, the chassis structure is made of iron beams and the furnace floor has a heat tolerance of 1500 degrees due to the Abarot channel, which protects the furnace floor from rotting and destruction. The upper part of this furnace is semi-circular and the heating in this furnace is sinusoidal and rotating, which results in temperature balance in the entire device, which means that the temperature difference in all points of the furnace is zero.

About the company

Aran Forough Samane Company

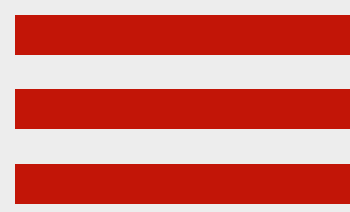

CEO

Fortunately, this technology has been implemented by Aran Forough Samane company for the first time in several years, and it has attracted the attention of construction industry professionals, and so far, very important projects in the country have been successfully implemented with this technology. Nanomaterials are materials that at least one of their dimensions is on the nanometer scale (below 100 nanometers). Reducing the size of the particles to the nanometer level causes changes in their physical and chemical properties. Therefore, nanotechnology discusses the changes in the properties of materials when the particle size is smaller than 100 nanometers. At present, the application of nanotechnology in the construction industry is small, compared to the extent of this industry. Although today we see the limited use of nano materials and materials in construction, but due to the capabilities of this emerging technology, it is expected that in the near future, we will see a very significant growth in the use of nano materials in the construction industry. It helps the construction industry in two ways. First, optimizing and improving the performance of existing technologies. Second, providing a new group of materials and products that were not possible before the emergence of nanotechnology. Therefore, among the advantages of using nanotechnology in the construction industry, we can mention the increase in the quality of materials, saving energy consumption and, as a result, economic savings. In the end, I must say that I expect the compatriots and respected officials of the city, especially the city council and the municipality, to encourage us in this field with their support.

Best regards: Bahram Nejad

About the company

Sablan Serir Data Security Company

About us

Sablan Serir Dadeban Company is a knowledge-based company that has a license to operate in the operational services of Afta. This company, which is located in the growth center of Mohaghegh Ardabili University and the science and technology park of Ardabil province, is a spawning company of the specialized cyber security laboratory of Mohaghegh Ardabili University (APA laboratory), which was founded in 2014 by Dr. Shahram Jamali, a member of the academic staff of this university. Is. The main activities and contracts of this group have been in the form of software development and providing security assessment services with different devices of the country.

Products

Sablan Serir Data Security Company

QNAS network storage

Backing up and storing a copy of data in a separate interface, in order to protect against loss or distortion and manipulation of information, is essential for organizations and companies. At first, this process was done manually on an external drive (DAS) or USB flash drive, but today, various solutions have been designed and developed to automate this process, which are products based on the (QNAS) architecture. The cloud storage resources of this range are NAS. It is a storage device capable of supporting 4 to 240 hard disks, which provides a storage service with very high performance, full security and easy to use, using the exclusive «Dideban» operating system. The ability to configure with a wide range of features such as managing backup files, managing downloads, configuring access permissions and a variety of access protocols has made it a very efficient storage.

Next products

Fileban compound antivirus

More than 230 thousand malware and malicious files are designed and developed in the world every day, antiviruses have different detection rates and it is not possible for a specific antivirus to detect all malicious software and files. Due to this challenge, systems called compound antivirus or Multi-AV have been developed, which simultaneously use several different antiviruses together. Total virus is one of the international examples of this type of system. File Ban is a composite antivirus that was designed and developed based on the needs of domestic companies and organizations, and has also solved the challenge of sending classified files to Total Virus servers. By using 20 of the most reliable international antiviruses together, FileBan ranks first in the country in terms of detection accuracy and the number of antiviruses used.

Services

Sablan Serir Data Security Company

Web and network security assessment

Today, one of the common approaches to ensure that the organization is at an acceptable level in terms of information security, is to conduct a test and evaluate the security of the information exchange space. In this way, after going through the stages of security testing and evaluation at different levels, known vulnerabilities are discovered and reported to the organization by providing safe solutions to fix them. This action can be effective in securing the platform and space for information exchange and secure the organization from the attacks of hackers to access information assets. Sablan Serir Data Ban Security Security Testing and Evaluation Company, with the use of experts in this field, with more than five years of experience and more than 300 penetration tests, gives the assurance to the organizations to act as a reliable consultant in this matter. acted and helped the organization in discovering its vulnerabilities.

About the company

Azaran Sanat Arta Novavar Company

about us

Azaran Sanat Arta Novavar company has started producing Artasan grill since 2021. The mentioned device has been patented on the intellectual property site and is the only grill approved by the standards department.

About the company

Azaran Sanat Arta Novavar Company

The products of this company

The Artasan electric two-sided smokeless barbecue makes it possible to cook any type of barbecue in a well-cooked manner, as well as away from any dangers and difficulties caused by traditional practices such as lighting a fire and piping gas. By using renewable electricity and not using fossil fuels, this device has provided the possibility of completely hygienic and healthy cooking, free of any toxic substances and dangerous and carcinogenic pollutants. The double-walled and unique body of this device causes high efficiency and saves electricity. The double-walled and unique body of this device causes high efficiency and saves electricity. Also, due to the placement of the element next to the food and the lack of direct contact with the heat, the barbecue is completely smoke-free. In addition, due to the placement of the skewers horizontally, there is no possibility of food falling during cooking. The Artasan electric grill is equipped with a rotating motor and a timer, and for this reason, it has made the easiest and most convenient way to cook kebabs.

About the company

Azaran Sanat Arta Novavar Company

Continuation of the description

With the rotation of the mentioned motor, the heat radiation is uniform and moderate on the food and 14 kebab skewers are cooked homogeneously and at the same time in the shortest possible time. With the rotation of the mentioned motor, the heat radiation is uniform and moderate on the food and 14 kebab skewers are cooked homogeneously and at the same time in the shortest possible time. Also, by setting the cooking time using the timer, the device turns off after the cooking time is over and prevents food from burning if you forget. Therefore, with the mentioned motor and timer, there will be no need to be next to the device to move the skewers or even to constantly stir, and the cooking and preparation of the kebab will be done without wasting time. By using the Artasan electric grill, there is no need to pipe gas or light a fire. Therefore, there will be no problems and risks caused by the use of previous similar devices, such as fire, gassing, falling of food during cooking, long cooking time, etc. Therefore, by using this device, you can cook the most convenient way of cooking kebab with the least amount of time. Experience the cost and away from any pollution and smoke in the shortest possible time and cook and enjoy one of the most desirable and healthiest Iranian dishes.

About the company

Arta Walnut Company

about us

Arta walnut company is the first specialized producer of walnut in Ardabil province. Relying on modern knowledge of horticulture and experience in the field of producing transplanted walnut seedlings and modifying local low-loading and cold-sensitive trees, this company has achieved important achievements that are welcomed by farmers day by day.

products

Chandler walnut tree is a product of our company. Chandler has the highest shelled walnut function among walnut types and has a regular and productive function. Chandler belongs to side-fruited species, which means that fruits are formed not only at the tips of branches, but also on young branches. Due to the side fruit, the walnut tree bears fruit on all the branches, and this leads to a very high harvest. -80 %90 of the yield of walnuts comes from lateral fruiting. This enables the walnut tree to bear fruit economically in the third or fourth year after planting. A Chandler walnut orchard often yields up to 5-4 tons of dry fruit per acre.

About the company

Arta Walnut Company

about us

Hero elevator and escalator company was founded in 2002 with a new approach in the field of elevator and escalator design. Relying on two decades of experience, our main goal as a reliable company alongside our customers is to act quickly and accurately to provide their opinions with emphasis on the qualitative and economic aspects before and after the sale. Because we believe that customer satisfaction can be achieved based on the recognition of their real and fundamental demands and their accurate and perfect implementation. Hero Elevator Company, in cooperation with reputable companies, implements the highest quality and best products in its products according to customer needs. On this basis, in 2012, according to the needs of the country's market and in line with the focus on the production and supply of quality parts, it has started to supply a complete elevator (package) under the brand «Kaherman Asansur». This package is made based on the parts of the top domestic manufacturers and giants of the world's elevator industry, including Germany's Zilabag, Turkey's Arkel, etc., and considering that the accuracy of installation is equal to the purchase of a high-quality product in good performance and optimal elevator performance and life. Its usefulness as an important factor.

About the company

Sablan Computer Science Foundation

Sablan Computer Science Foundation Holding was established in 2012 with the aim of providing innovative solutions and solving the challenges of the electronics industry and producing a variety of high-tech power and controller boards for advanced tools. Currently, by using high technical knowledge and a young expert team, it produces various products in the automotive electrical industry under the CPM brand. These products include all kinds of relays, sensors, car boards, all kinds of connections and car electric wiring harnesses, which go to the market with excellent quality. CPM aims to respond creatively to the needs of the automotive industry. More than %90 of the innovations introduced in the automotive industry are related to the electric part of cars. Connectors are critical components in automotive wiring systems and play a key role in the connections between various electrical components. Therefore, improving the performance and efficiency of automotive wiring systems is highly dependent on quality electrical connections. CPM company's connectors are designed and manufactured with the help of local specialists with high precision and mechanical strength to withstand harsh and harsh conditions governing the car system, and in this way they fulfill their commitment to the quality and safety of our dear customers.

products

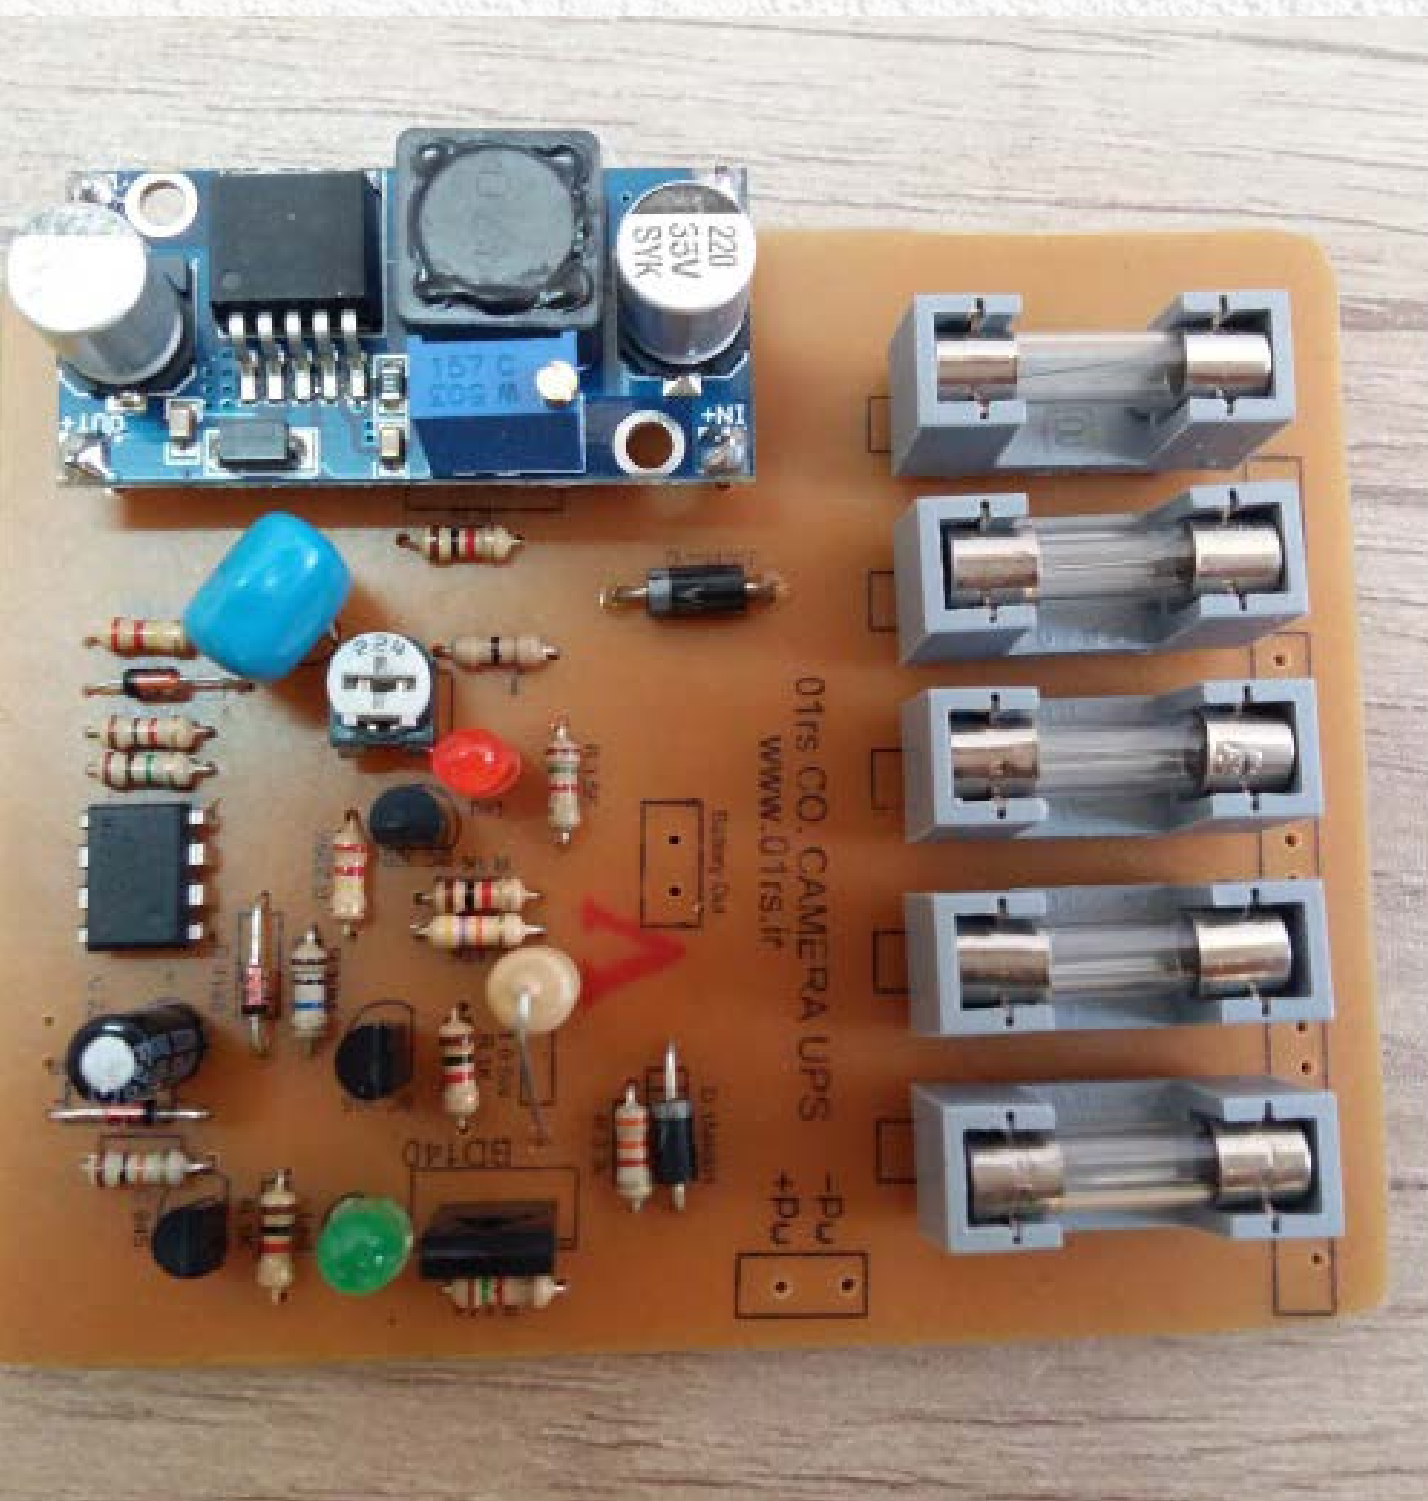

About the company

Sablan Computer Science Foundation

Simultaneous multi-axis controller:

To control precise devices made of step motor or servo motor, it consists of one board as a user setting panel with display input and one board as the main board receiving information from the panel and sensors and several control boards with separate processors. has been For simultaneous control and coordination, it is done only with the main board. Also, for ease of connections and easy replacement, it has several interface boards that are used when connecting to motors and sensors and controlling AC motors, etc., and the two processors are fully synchronized with a working frequency of 32 MHz. In addition, the controller is designed for snap motors with high-speed encoders, which has an acceleration of about 2000 revolutions in 0.6 seconds, and this acceleration is transferred to the motor drive with a fast and very smooth smooth motion algorithm. The engine has a very high instantaneous acceleration and is very hot. Don't slow down and be quiet.

About the company

Novin Subak Saz Sablan Company

about us:

Novin Subak Saz Sablan Company has started its activity in the field of producing concrete parts using fully automatic German machines under the Arax brand since 1384, which became possible for the first time in the country with the launch of this production unit. Production of concrete products with dry pressing and use of concrete with low water-cement ratio. The use of concrete with a low water-cement ratio has made the products of this company very durable and resistant to high pressures and harsh environmental conditions. This company has the ability to produce concrete flooring for use in sidewalks and traffic passages.

Top features

Novin Subak Saz Sablan Company

1. The possibility of producing products from 5 to 50 cm high
2. Production of each square meter of two-layer paving in less than 15 seconds
3. The possibility of changing the production line to produce a new product in less than 15 minutes
4. It has a concrete laboratory equipped with modern European standards
5. Having a research and development unit to optimize product quality and produce new products
6. Use of central computer control system
7. Use of fully automatic German machines
8. The use of a processing area with more than 4000 shelves that allows controlling the effective parameters in concrete processing (temperature and humidity) (possibility of production in all seasons of the year and any type of weather conditions)
9. The first manufacturer of fully automatic concrete parts with modern technology in Iran
10. Use of special quality waste rock mines to produce usable sand
11. Using the product tracking code inserted on the manufactured products
12. The owner of the complete sand production line
13. National product standard certificate holder

Armant Company

about us:

Choosing the right software is very difficult and even after many reviews, there are still doubts. The information on domestically produced software is also very scattered.

Armant provides an environment to facilitate study, comparison, decision making and selection for the country's software market by collecting domestically produced software information. Armant doesn't sell you anything, it just gives you the information you need to make a choice. The information provided by the software developers to Armant..
